

# **EPON OLT FD1108S CLI User Manual**

# Contents

<b>CONTENTS.....</b>	<b>2</b>
<b>1    OVERVIEW .....</b>	<b>7</b>
1.1    INTRODUCTION.....	7
1.2    COMMAND EXPLANATIONS IN EACH SECTION .....	7
1.3    COMMAND PRESENTATION IN EXAMPLES.....	7
1.4    COMMAND SYNTAX.....	8
1.5    EDITING FUNCTIONS, KEYSTROKES, AND ABBREVIATIONS .....	8
<b>2    COFIGURATION PREPARATION .....</b>	<b>9</b>
2.1    CONSOLE PORT CONNECTION.....	9
2.2    NETWORK CONNECTION.....	9
<b>3    CLI COMMAND MODE.....</b>	<b>10</b>
3.1    USER LOGIN EPON CLI SYSTEM .....	10
3.2    CLI COMMAND HELP.....	10
3.3    CONFIGURE TERMINAL.....	12
<b>4    SYSTEM MANAGEMENT .....</b>	<b>12</b>
4.1    CHANGE SYSTEM USER AND PASSWORD .....	12
4.2    SYSTEM CONFIGURATION FILE .....	13
<i>Backup OLT Configuration File</i> .....	13
<i>Restore OLT configuration from PC</i> .....	13
<i>Backup ONU Configuration File</i> .....	14
<i>Restore ONU Configuration File from PC</i> .....	14
4.3    CONFIGURATION MANAGEMENT.....	15
<i>Factory Default Configuration</i> .....	15
<i>Save Configuration</i> .....	15
<i>Show current running- configuration</i> .....	15
<i>Show current startup-configuration</i> .....	16
<i>Reboot System</i> .....	16
4.4    SYTEM UPDATE FIRMWARE.....	16
<i>system update Olt 's firmware</i> .....	16
<i>upgrade all onu(s) by CTCS</i> .....	17
4.5    LOG MANAGEMENT .....	17
<i>Backup Log</i> .....	17
<i>Flush log</i> .....	18
4.6    SNMP MANAGEMENT .....	18
<i>SNMP Read Community</i> .....	18
<i>SNMP Write Community</i> .....	18

---

<i>Trap IP Configuration</i> .....	19
4.7 NETWORK ADDRESS MANAGEMENT .....	19
<i>Network Parameter Configuration</i> .....	19
<i>Management VLAN Configuration</i> .....	20
4.8 CONFIGURATION .....	20
<i>Configure system time automatically by NTP</i> .....	20
<i>Configure system time manually</i> .....	20
4.9 SHOW SYSTEM CONFIGURATION .....	21
<i>Show system infor</i> .....	21
<i>Show system ipconfig</i> .....	21
<i>Show system log</i> .....	22
<i>Show system memory</i> .....	23
<i>Show system mgmt-vlan</i> .....	23
<i>Show system snmp</i> .....	23
<b>5 SWITCH CONTROL CARD CONFIGURATION.....</b>	<b>24</b>
5.1 STORM CONTROL.....	24
<i>Enable/Disable Storm Control</i> .....	24
<i>Storm Control Configuration</i> .....	24
5.2 PORT MANEGEMNET .....	25
<i>enter switch port config mode</i> .....	25
<i>Port parameters</i> .....	25
<i>Add vlan list of port</i> .....	27
<i>Delete the vlan list of port</i> .....	28
<i>Show swport current configuration information</i> .....	28
<i>Configuration ingress-port rate</i> .....	29
<i>Configuration egress-port rate</i> .....	29
5.3 CONFIGURE SWITCH MODE .....	29
<i>Show vlan state</i> .....	29
<i>Configure vlan enable/disable</i> .....	30
5.4 MAC ADDRESS MANAGEMENT .....	30
<i>Configure mac-address aging timeout</i> .....	30
<i>Show mac-address aging</i> .....	30
5.5 VLAN CONFIGURATION MANAGEMENT .....	31
<i>Create vlan</i> .....	31
<i>Add vlan port member</i> .....	31
<i>Delete vlan port member</i> .....	32
<i>Delete vlan</i> .....	32
<i>Show vlan configuration of vlan</i> .....	32
5.6 RSTP CONFIGURATION MANAGEMENT .....	33
<i>Enable/disable RSTP configuration</i> .....	33
<i>Configure Rstp bridge maxage aging time</i> .....	33
<i>Configure Rstp bridge delay time</i> .....	34
<i>Configure Rstp bridge priority</i> .....	34
<i>Configure max counts of Rstp packet per second</i> .....	35

---

<i>Configure Rstp port priority</i> .....	35
<i>Configure Rstp port path-cost</i> .....	35
<i>Configure Rstp edge-port</i> .....	36
<i>Configure Rstp p2p port</i> .....	36
<i>Configure Rstp protocol version check</i> .....	37
<i>Show Rstp information</i> .....	37
5.7 TRUNK CONFIGURATION MANAGEMNET.....	38
<i>Enter trunk config mode</i> .....	38
<i>Add port of trunk member</i> .....	39
<i>Delete port of trunk member</i> .....	39
<i>Delete trunklist configuraion</i> .....	39
<i>Show trunk information</i> .....	40
5.8 RMON NETWORK MONITORING AND CONFIGURATION .....	40
<i>rmon history configuration</i> .....	41
<i>rmon event configuration</i> .....	42
<i>rmon alarm configuration</i> .....	43
<i>Show rmon statistics information</i> .....	44
<i>Show rmon history information</i> .....	44
<i>show rmon event information</i> .....	45
<i>Show rmon eventlog information</i> .....	45
<i>Show rmon alarm information</i> .....	46
5.9 MIRROR PORT CONFIGURATION MANEGEMENT ENABLE/DISABLE MIRROR FUCTION.....	46
<i>Configure mirror source_port</i> .....	47
<i>Configure mirror dest_port</i> .....	48
<i>Add/delete vlan soure_port of in_packet</i> .....	48
<i>Show mirror information</i> .....	49
<b>6 OLT MANAGEMENT .....</b>	<b>49</b>
6.1 OLT BASIC CONFIGURE MANAGEMENT .....	49
<i>Enter OLT Management</i> .....	49
<i>Enable/disable OLT port</i> .....	50
<i>Long light checking Function</i> .....	50
<i>Configure p2p Function</i> .....	51
<i>Configure out-tpid Function</i> .....	51
6.2 OLT ACL CONFIGURE .....	51
<i>Delete One ACL</i> .....	51
<i>Delete Current OLT All ACL</i> .....	52
<i>Add OLT ACL</i> .....	52
6.3 OLT MAC MANAGEMENT .....	53
<i>Configure OLT MACAge Time</i> .....	53
<i>Flush current olt's mac table list</i> .....	54
<i>Enable OLT MAC Learenning function</i> .....	54
<i>Disable OLT MAC Learning Function</i> .....	54
<i>Enable MAC Move</i> .....	54
<i>Disable MAC Move</i> .....	55

---

6.4	OLT AUTH .....	55
	<i>Disable OLT Auth</i> .....	55
	<i>Add/Delete&gt;Show Whitelist</i> .....	55
	<i>Add/Delete&gt;Show Blacklist</i> .....	56
	<i>OLT hybrid Auth Mode Configure</i> .....	57
	<i>OLT Hybrid LOID Auth Mode Configure</i> .....	58
	<i>OLT MAC Auth Mode Configure</i> .....	59
6.5	CONFIGURE PACKET_FILTER OF OLT .....	59
	<i>Packet_filter of OLT about DHCP function</i> .....	59
	<i>EOC MME packet-filter function</i> .....	59
6.6	CONFIGURE TRAP ALARM AND MESSAGE ALARM FUNCTION OF ONU .....	60
	<i>Configure message alarm about ONU off the electricity</i> .....	60
	<i>Configure trap alarm about ONU off the electricity</i> .....	60
6.7	CONFIGURE QINQ FUNCTION .....	60
	<i>Add QinQ configuration</i> .....	60
	<i>Delete QinQ configuration</i> .....	61
6.8	SHOW OLT CONFIGURATION INFORMATION .....	61
	<i>Show olt attribute information</i> .....	61
	<i>Show olt optical information</i> .....	62
	<i>Show olt online-onu information</i> .....	62
	<i>Show olt acl information</i> .....	63
	<i>Show olt auth mode information</i> .....	63
	<i>Show olt port staus information</i> .....	63
	<i>Show olt alarm information</i> .....	64
	<i>Show olt learning-mac information</i> .....	64
	<i>Show olt p2p information</i> .....	65
	<i>Show olt packet-filter information</i> .....	65
	<i>Show olt tpid out-tpid</i> .....	65
7	ONU MANAGEMENT .....	66
7.1	SHOW ONU BASIC INFORMATION .....	66
	<i>Show Online ONU</i> .....	66
	<i>Show ONU Version</i> .....	66
	<i>Show ONU Capabilities</i> .....	67
	<i>Show ONU Optical</i> .....	67
7.2	ONU MANAGEMENT MODE .....	67
7.3	ONU BASIC OPERATION AND MANAGEMENT .....	68
	<i>Reboot ONU</i> .....	68
	<i>Deregister ONU</i> .....	68
	<i>Configure ONU FEC</i> .....	68
	<i>Restore ONU to Default Settings</i> .....	69
	<i>Configure ONU Sys Management IP</i> .....	69
	<i>Save Current ONU Configuration</i> .....	69
7.4	CONFIGURE ONU IGMP .....	69
	<i>ONU IGMP Global Configuration</i> .....	69

<i>Configure ONU UNI Port IGMP .....</i>	70
7.5     ENTER ONU LINK MODE .....	71

8.1     PING COMMAND TEST.....	81
8.2     TRACERT CHECKING THE DEVICE THE PATH OF THE HOST .....	82
<b>INCLUDING REMARKS .....</b>	<b>82</b>

# 1 Overview

## 1.1 Introduction

This document is for those who perform all tasks for the FD1108S once it has been successfully installed. Users of this Guide should understand EPON technology and have experience configuring EPON devices.

C-Data OLT FD1108s system could support inband and outband network management mode and EMS network management based on SNMP.

The user can use several different network interfaces to do network management, such as those listed below:

- SNMP Management
- CLI Management

This manual introduce CLI configuration function of EPON OLT.

In the initial setup step of OLT, there are two ways based on CLI management to login system:

- Terminal Emulation of CONSOLE port (RJ-45)
- Telnet of management port (RJ-45)

## 1.2 Command Explanations in each Section

Commands are usually presented in the following ways:

- Tables for specific functions or features that include important parameters
- Specific commands that are part of examples
- A table at the end of each Section that includes all commands and descriptions of all parameters.

## 1.3 Command Presentation in Examples

When a command is presented in an example, it follows the exact syntax and parameter values that match the

example configuration. If a command is very long, a (->) is used to note the command continues on the next line.

## 1.4 Command Syntax

The syntax rules for a Command and its parameters use the following conventions throughout this document:

- Blackface letter indicates command itself or command keyword
- “< >”                         The text inside it is the required parameters
- [] = Optional                     The text inside it is the optional parameters
- | = Option (OR)                 The multiple items which are divided are multi-select required parameters, indicating that must select one of them.
- “<x-y>”                         Value range from x to y. One is selected.

## 1.5 Editing Functions, Keystrokes, and Abbreviations

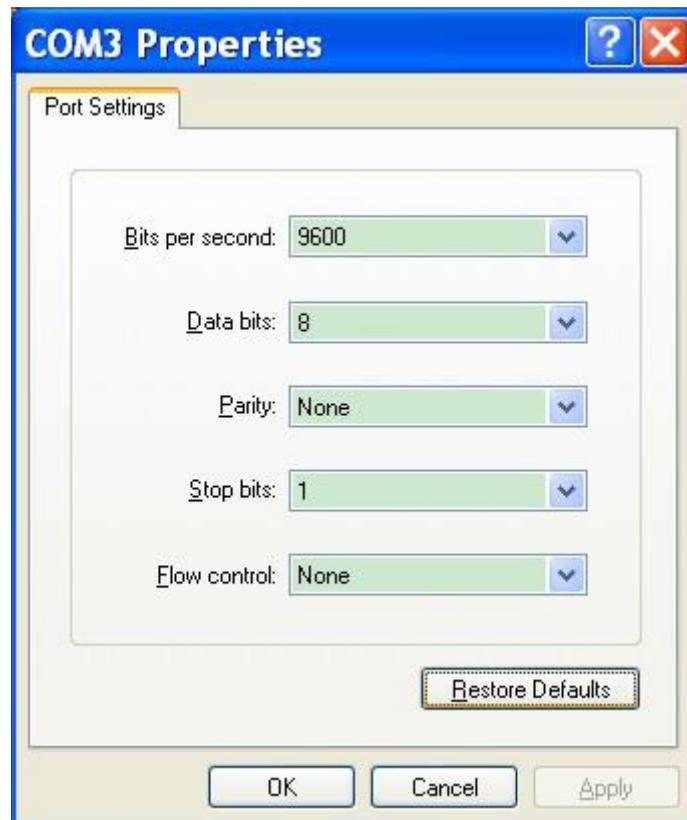

The product supports line editing, line recall, and abbreviations, so that command line input and editing can be done very quickly once command syntax and the line editing commands are learned.

Action	Key Sequence
Move cursor within command line	left and right arrow
Delete character to left of cursor	[Delete] or [Backspace]
Clear command line	[Ctrl/U]
Recall previous command in command history	CTRL/P or up arrow
Recall next command in command history	CTRL/N or down arrow
Automatically complete a partially entered command keyword	[Tab] or [Ctrl/I]

## 2 Configuration Preparation

### 2.1 Console Port Connection

There is a Console port in the front panel of Switch Control Card .The command line configuration interface is enabled via console port connecting to the NMS's superior terminal. Super terminal's basic configuration is as follows:

### 2.2 Network Connection

FD1108S support inband management (CAT5 connect to ge1-ge8 port) and outband management (CAT4 cable to management port).After Telnet to CLI interface ,we can manage the EPON products.

Defualt outband(inband) network management IP:**192.168.1.100**

## 3 CLI Command Mode

OLT CLI use the layered command structure (Command mode) . Every command mode provides subset of CLI command. The available CLI command depends on those command modes which have been activated currently.

### 3.1 User Login EPON CLI System

System provide two login accounts default as follows:

Username	Password
admin	admin
guest	Null

After you log in successfully, the following interface pops up :

```
admin login

Username:admin
Password:****

Entry level 2(manager) successfully!

epon#

-----
guest login

Username:guest

Entry level 1(visitor)

epon>
```

### 3.2 CLI Command Help

When the command lines shows : epon> or epon#, user can input the configuration command to mange or inquire the configuration information .

OLT CLI command provides various help and shortcut keys. Next table lists main shortcut keys of obtaining help and methods in CLI command.

#### CLI command Help

<b>Method</b>	<b>Function</b>
Type “?” in any CLI command level	Show all available commands
Partial command+“? ”	Show the initial command list of the specific character string(There is no space between the command and the question mark)
Command+Space +“? ”	Show the completer syntax and the brief instruction of command
Partial command +<tab>	System will automatically complete the command or keyword
Ctrl-P” or the up arrow key ↑	Invoke the executed command previously.

For example 1:

```
epon#?
debug           - debug
logout          - exit the CLI system
mac-address     - ctrl-card dynamic mac address table management
olt             - configure OLT
show            - show system configuration
storm-ctrl      - configure storm-control
swmode          - set basic switch mode
swport          - enter switch port config mode
system          - configure system
vlan            - enter vlan config mode
```

For example 2:

```
epon# s?
storm-ctrl      swmode          swport          system
show
epon# s
```

For example 3:

```
epon#show + [ ? ]
mac-address     - mac-address
olt             - show olt's configuration
running-config  - show current running-configuration
storm-ctrl      - show storm-control configuration
swmode          - show swmode
swport          - display port attribute information
system          - show system configuration
vlan            - show vlan configuration
```

### 3.3 Configure Terminal

The command mode allows the user to change equipment configuration. The changed configuration can be saved into OLT flash memory and used when system is started next time.

Configuration mode allows distributing and modifying each port separately for the specific parameters (Optical Line Terminal).

For example1: epon# swport ge1

System prompt is epon(GE-1)#

For example2: epon# olt 1

System prompt is epon(olt-1)#

ONU configuration mode is the sub-mode of configuration command mode of olt, and is used to configure the logical port parameters of ONU

For example: epon(olt-1)# onu 60

System prompt is epon(olt-1/onu-60)#

## 4 System Management

### 4.1 Change system user and password

<b>Command Grammar</b>	epon# <b>system user &lt;old-password&gt; &lt;new-user&gt; &lt;new-password&gt; &lt;comfirm-password&gt;</b>
<b>Function</b>	Change system user and password
<b>&lt;old-password&gt;</b>	Old password
<b>&lt;new-user&gt;</b>	New username
<b>&lt;new-password&gt;</b>	New password
<b>&lt;comfirm-password&gt;</b>	Comfirm password

## 4.2 System Configuration File

Backup OLT Configuration File

<b>Command Grammar</b>	epon# <b>system configurations backup olt &lt;tftp-server&gt;</b>
<b>Function</b>	Backup OLT configuration File to PC, firstly, the tftp server should be ready.
<b>&lt;tftp-server&gt;</b>	Tftp server ip address, eg: 192.168.1.130

### 【Example】

Example 1: Backup OLT configuration file to PC:

```
epon# system configurations backup olt 192.168.2.133
Backup olt configurations file to host 192.168.2.133.
Remote filename: olt_cfg_backup_20000101055726.tar.gz.

epon#
```

Restore OLT configuration from PC

<b>Command Grammar</b>	epon# <b>system configurations download olt &lt;tftp-server&gt; &lt;filename&gt;</b>
<b>Function</b>	Restore OLT configuration from PC, firstly, the tftp server and configrefile should be ready.
<b>&lt;tftp-server&gt;</b>	Tftp server ip address, eg: 192.168.1.130
<b>&lt;filename&gt;</b>	The Configuration File. eg: olt_cfg_backup_20000101055726.tar.gz

### 【Example】

Example 1: Restore OLT configuration from PC:

```
epon#     system     configurations     download     olt     192.168.2.130
olt_cfg_backup_20000101063321.tar.gz
Download olt configurations file from host 192.168.2.130.

epon#
```

## Backup ONU Configuration File

<b>Command Grammar</b>	epon# <b>system configurations backup onu &lt;tftp-server&gt;</b>
<b>Function</b>	Backup ONU configuration File to PC, firstly, the tftp server should be ready.
<b>&lt;tftp-server&gt;</b>	Tftp server ip address, eg: 192.168.1.130

### 【Example】

Example 1: Backup ONU Configuratin to PC:

```
epon# system configurations backup onu 192.168.2.130
Backup onu configurations file to host 192.168.2.130.
Remote filename: onu_cfg_backup_20000101060207.tar.gz.

epon#
```

## Restore ONU Configuration File from PC

<b>Command Grammar</b>	epon# <b>system configurations download onu &lt;tftp-server&gt; &lt;filename&gt;</b>
<b>Function</b>	Restore ONU configuration from PC, firstly, the tftp server and configurefile should be ready.
<b>&lt;tftp-server&gt;</b>	Tftp server ip address, eg: 192.168.1.130
<b>&lt;filename&gt;</b>	The Configuration File. eg: olt_cfg_backup_20000101055726.tar.gz

### 【Example】

Example 1: Restore ONU configuration from PC:

```
epon#     system     configurations     download     onu     192.168.2.130
onu_cfg_backup_20000101060207.tar.gz
Download onu configurations file from host 192.168.2.130.

epon#
```

## 4.3 Configuration Management

### Factory Default Configuration

<b>Command Grammar</b>	epon# <b>system default</b>
<b>Function</b>	Set the device back to factory default configuration. Remark: the device would reboot.

### Save Configuration

<b>Command Grammar</b>	epon# <b>system save &lt;all&gt; or &lt;olt&gt;</b>
<b>Function</b>	Save device configuration.
<b>&lt;all&gt;</b>	Take this parameter will save all device, include all olt an all onu.
<b>&lt;olt&gt;</b>	Take this parameter only save olt configuration.

### Show current running- configuration

<b>Command Grammar</b>	epon#show running-config <all>,<auth>,<olt>,<onu> or <swh>
<b>Function</b>	show current running-configuration
<b>all</b>	show current all running-configuration Include OLT and ONU
<b>auth</b>	show current auth running-configuration
<b>olt</b>	show OLT running-configuration
<b>onu</b>	show ONU running-configuration
<b>swh</b>	show current swith running-configuration

Show current startup-configuration

<b>Command Grammar</b>	epon#show startup-config <all> ,<auth>, <olt>,<onu> or <switch>
<b>Fuction</b>	show current startup-configuration
<b>all</b>	show current all startup-configuration
<b>auth</b>	show current auth startup-configuration
<b>olt</b>	show olt startup-configuration
<b>onu</b>	show onu startup-configuration
<b>switch</b>	show current switch startup-configuration

Reboot System

<b>Command Grammar</b>	epon# <b>system reboot</b>
<b>Function</b>	Reboot OLT.

#### 4.4 System update firmware

system update OLT 's firmware

<b>Command Grammar</b>	system update firmware <firmware> tftp-server <ip>
<b>Fuction</b>	System update olt's firmware Tftp server and firmware file should be ready
<firmware>	update system firmware
<ip>	tftp server IP address

upgrade all onu(s) by CTCS

<b>Command Grammar</b>	system update onu <tftp-server> <file> <type>
<b>Function</b>	upgrade all onu(s) by CTC Tftp server and firmware file should be ready
<tftp-server>	tftp server IP address
<file>	image name
<type>	device type

## 4.5 Log Management

Backup Log

<b>Command Grammar</b>	epon#system log system log backup <server-ip>
<b>Function</b>	Backup system log to PC, firstly, tftp server should be ready.
<server-ip>	Tftp server ip address, eg: 192.168.1.130

### 【Example】

Example 1: Backup system log to PC:

```
epon# system log backup 192.168.2.130
Backup local log file to host 192.168.2.130 successfully, remote filename:
log_backup_20000101002224.txt!
```

### 【Example】

Example 2: Show system all log:

```
epon# show system log all
```

## Flush log

<b>Command Grammar</b>	epon# <b>system log flush</b>
<b>Function</b>	Flush all system log.

### 【Example】

Example 1: Flush system all log:

```
epon# system log flush
Flush log file successfully!
epon#
```

## 4.6 SNMP Management

### SNMP Read Community

<b>Command Grammar</b>	epon# <b>system snmp community read-only &lt;community&gt;</b>
<b>Function</b>	Set SNMP Read Community.
<b>&lt;community&gt;</b>	Read Community, the string's length should not lenger than 16 chars. eg: public.

### SNMP Write Community

<b>Command Grammar</b>	epon# <b>system snmp community read-write &lt;community&gt;</b>
<b>Function</b>	Set SNMP Write Community .
<b>&lt;community&gt;</b>	Write Community, the string's length should not lenger than 16 chars. eg: private.

## Trap IP Configuration

<b>Command Grammar</b>	epon# <b>system snmp trap-ip &lt;index&gt; &lt;ip-addr&gt;</b>
<b>Function</b>	Set the SNMP Trap IP Address, could set up to 4 trap ip
<b>&lt;index&gt;</b>	index : 1-4.
<b>&lt;ip-addr&gt;</b>	IP Address. Eg: 192.168.1.130

## 4.7 Network Address Management

<b>Command Grammar</b>	epon# <b>system ipconfig</b>
<b>Function</b>	Configure the Network Address of inband and outband management IP.

### 【Example】

Example 1: Show command parameter

```
epon#system ipconfig           // enter“? ”
<ip>                         - ip address, example: 192.168.0.233
<netmask>                     - netmask address, for example: 255.255.255.0
<gateway>                     - gateway
```

## Network Parameter Configuration

<b>Command Grammar</b>	epon# <b>system ipconfig &lt;ip&gt; &lt;netmask&gt; &lt;gateway&gt;</b>
<b>Function</b>	Configure inband and outband management IP address netmask gateway.
<b>&lt;ip&gt;</b>	IP address. eg: 192.168.1.100
<b>&lt;netmask&gt;</b>	Netmask. eg: 255.255.255.0
<b>&lt;gateway&gt;</b>	Gateway. eg: 192.168.1.254

### 【Example】

Example 1: Configure the manage ip to 192.168.1.100, netmask to: 255.255.255.0, gateway to 192.168.1.254:

```
epon# system ipconfig 192.168.1.100 255.255.255.0 192.168.1.254
```

Example 2: Show the Network IP address Parameter

```
epon# show system ipconfig
ip      : 192.168.1.100
netmask : 255.255.255.0
gateway : 192.168.1.1
MNGMT-VID : 1
epon#
```

### Management VLAN Configuration

<b>Command Grammar</b>	epon# <b>system mgmt-vlan &lt;vid&gt;</b>
<b>Function</b>	Configure the management vlan id.
<b>&lt;vid&gt;</b>	VLAN ID: 1~4094

## 4.8 configuration

Configure system time automatically by NTP

<b>Command Grammar</b>	epon# <b>system date auto</b>
<b>Function</b>	Configure system time automatically by NTP

Configure system time manually

<b>Command Grammar</b>	epon# <b>system date manual &lt;time&gt;</b>
<b>Function</b>	Configure system time manually

<b>&lt;time&gt;</b>	Time format: YYYY.MM.DD-hh:mm:ss
---------------------	----------------------------------

**【Example】**

Example1: manually systime is 2015.12.12 10h:10m:10s

epon# system date manual 2015.12.12-10:10:10
--

## 4.9 show system configuration

Show system infor

<b>Command Grammar</b>	epon# show system infor
<b>Function</b>	show system infor

**【Example】**

Example1: show device system infor

epon# show system infor
Software Version : 2.2.01s(Jan 9 2015)
Hardware Version : Unknown
MAC : e0-67-b3-00-00-00
Serial Number : Unknown
System Time :
System Temperature :
FAN[1] : Normal
FAN[2] : Normal
FAN[3] : Normal

Show system ipconfig

<b>Command Grammar</b>	epon# show system ipconfig
<b>Function</b>	show ipconfig

**【Example】**

Example 1: show system ipconfig

```
epon# show system ipconfig
ip      : 192.168.1.100
netmask : 255.255.255.0
gateway : 192.168.1.1
MNGMT-VID : 1
```

### Show system log

<b>Command Grammar</b>	epon# show system log <all> or <tail>
<b>Function</b>	show device system log
<b>tail</b>	show the tail of the log file
<b>all</b>	Show the all logs

#### 【Example】

Example 1: show the tail of the log file

```
epon# show system log tail
01/01/00 00:44:42 Bridge Max Age : 30
01/01/00 00:44:49 Bridge Max Age must be less than or equal to twice the the
Bridge Forwarding Delay minus 1.^
01/01/00 00:44:49 Bridge Forwarding Delay : 20
01/01/00 00:44:54 Bridge Max Age must be less than or equal to twice the the
Bridge Forwarding Delay minus 1.
01/01/00 00:44:54 Bridge Forwarding Delay : 20
01/01/00 00:00:22 Receive from rstp bpdu handle message queue failed!
01/01/00 00:00:25 (cdtDeviceStateSet) Slot 1 olt 1~4 deregistered.

### Show system memory

<b>Command Grammar</b>	epon# show system memory
<b>Function</b>	show system memory

#### 【Example】

Example1: show system memory

```
epon# show system memory
      total        used        free        shared       buffers
Mem:    61428        25712      35716          0          0
-/+ buffers: 25712        35716
Swap:      0            0            0
```

### Show system mgmt-vlan

<b>Command Grammar</b>	epon# show system mgmt-vlan
<b>Function</b>	show system mgmt-vlan

#### 【Example】

Example 1: show system mgmt-vlan

```
epon# show system mgmt-vlan
system mgmt-vlan : 1
```

### Show system snmp

<b>Command Grammar</b>	epon# show system snmp
<b>Function</b>	Show system snmp

**【Example】**

Example 1: show system snmp

```
epon# show system snmp
Read-only community : public
Read-write community : private
```

## 5 Switch control card configuration

### 5.1 Storm Control

Enable/Disable Storm Control

<b>Command Grammar</b>	epon# <b>storm-ctrl admin &lt;state&gt;</b>
<b>Function</b>	Enable or Disable Storm Control function
<b>&lt;state&gt;</b>	Enable: Open the storm control function Disable: Close the storm control function

Storm Control Configuration

<b>Command Grammar</b>	epon# <b>storm-ctrl type &lt;type&gt; rate &lt;value&gt;</b>
<b>Function</b>	Configure the storm control parameter
<b>&lt;type&gt;</b>	By now, support the follow: bcast-mcast-dlf, broadcast multicast dlf broadcast-multicast broadcast-dlf multicast-dlf
<b>&lt;value&gt;</b>	The packet rate : 0-1000000(kbps)

## 5.2 Port manegemnet

enter switch port config mode

<b>Command Grammar</b>	epon# <b>swport &lt;port&gt;</b>
<b>Function</b>	enter switch port config mode
<b>&lt;port&gt;</b>	Switch port number ,<ge1-ge16>

### 【Example】

Example 1: Enter Sithch port ge1 config mode

```
epon# swport ge1
epon(GE-1)#
```

<b>epon(GE-1) # ?</b>	Enter“? ”or “help”show the current directory :
<b>admin</b>	- enable or disable current port
<b>admit-frame</b>	- set port access frame type
<b>auto-nego</b>	- enable auto-nego
<b>def-pri</b>	- set port default priority
<b>exit</b>	- exit current mode
<b>flow-ctrl</b>	- set port flow control
<b>learning</b>	- configure switch port learning
<b>pvid</b>	- configure the PVID
<b>rate-ctrl</b>	- configure rate-control
<b>speed</b>	- configure the SPEED
<b>Global command:</b>	
<b>debug</b>	- debug
<b>logout</b>	- exit the CLI system
<b>show</b>	- show system configuration

Port parameters

### Enable current port

<b>Command Grammar</b>	epon(GE-1)# <b>admin enable</b>
<b>Function</b>	Configuration current port enable

## Disable current port

<b>Command Grammar</b>	<b>epon(GE-1)# admin disable</b>
<b>Function</b>	Disable current port

## Set port access frame type

<b>Command Grammar</b>	<b>epon(GE-1)# admit-frame &lt;type&gt;</b>
<b>Function</b>	set port access frame type
<b>&lt;type&gt;</b>	all: all of packet. tagged: only receive tag packet untagged:only receive untag packet .

## Set port default priority

<b>Command Grammar</b>	<b>epon(GE-1)# def-pri &lt;priority&gt;</b>
<b>Function</b>	Configure the switch port default pvid, when switch port receive packet with no tag, it will give the packet default pvid, that is the default 802.1p priority.
<b>&lt;priority&gt;</b>	Config priority ,valuae: <0-7>

## Set port flow-ctrl function

<b>Command Grammar</b>	<b>epon(GE-1)# flow-ctrl &lt;admin&gt;</b>
<b>Funcion</b>	Configurate storm control

<b>&lt;admin&gt;</b>	disable: disable flow-control function enable: enable flow-control function
----------------------	--

## Configure the pvid of port

<b>Command Grammar</b>	epon(GE-1)# <b>pvid &lt;pvid&gt;</b>
<b>Function</b>	Configure the pvid of port
<b>&lt;pvid&gt;</b>	Optional parameters: 0-4094.

## Configure auto-nego of port

<b>Command Grammar</b>	epon(GE-1)# <b>auto-nego</b>
<b>Function</b>	Configure auto-nego of port

## Configure the speed of port

<b>Command Grammar</b>	epon(GE-1)# <b>speed &lt;speed&gt; duplex &lt;duplex&gt;</b>
<b>Function</b>	Configure the speed of port
<b>&lt;speed&gt;</b>	Effective parameter; <10m 100m 1000m>
<b>&lt;duplex&gt;</b>	Optional parameters <full half>

Add vlan list of port

<b>Command Grammar</b>	epon(GE-1)# <b>vlan add &lt;vidlist&gt; &lt;tag&gt;</b>
<b>Function</b>	Add vlan list port and set up tag mode

<b>&lt;vidlist&gt;</b>	vlan id list,<Combination of 1~4094>
<b>&lt;tag&gt;</b>	Mark way is optional parameters, Given tag parameters is out of the packet with the tag The tag parameter default is out of the packet without the tag

**【Example】**

Example 1: create Vlan2-100 with the TAG TAG, create vlan101-200 without the TAG markup under the exchange ge1 port

```
epon(GE-1)# vlan add 2-100 tag
epon(GE-1)# vlan add 101-200
```

Delete the vlan list of port

<b>Command Grammar</b>	epon(GE-1)# vlan delete <vidlist>
<b>Function</b>	Delete the vlan list of port
<b>&lt;vidlist&gt;</b>	vlan id list,<Combination of 1~4094>

**【Example】**

Example 1: delete vlan 2-200 of ge1 pot

```
epon(GE-1)# vlan del 2-200
```

Show swport current configuration information

<b>Command Grammar</b>	epon# <b>show swport ge1 attribute</b>
<b>Function</b>	Show swport current configuration information

**【Example】**

Example 1:show swport current configuration of ge1 port information

```
epon# show swport ge1 attribute
          GE-1 STATE
Link-State      : Link-down
Admin-State     : Enable
```

Flow-Control	: Disable
Speed-State	: 1000
Duplex-State	: Full
Learning	: Disable
Egress-Rate-Limit	: Disable
Ingress-Rate-Limit	: Disable
Priority	: 0
PVID	: 1

Configuration ingress-port rate

<b>Command Grammar</b>	epon(GE-1)# <b>rate-ctrl ingress &lt;rate&gt;</b>
<b>Function</b>	Configuration ingress-port rate
<b>&lt;rate&gt;</b>	0-1000000(kps)

Configuration egress-port rate

<b>Command Grammar</b>	epon(GE-1)# <b>rate-ctrl egress &lt;rate&gt;</b>
<b>Function</b>	Configuration engress-port rate
<b>&lt;rate&gt;</b>	0-1000000(kps)

### 5.3 Configure switch mode

Show vlan state

<b>Command Grammar</b>	epon#show swmode vlan
<b>Function</b>	Show vlan state

#### 【Example】

Example 1: show swmode vlan :

```
epon# show swmode vlan
VLAN STATUS : Disable
```

Configure vlan enable/disable

<b>Command Grammar</b>	epon# <b>swmode vlan &lt;mode&gt;</b>
<b>Function</b>	Configuration
<b>&lt;mode&gt;</b>	Enable :based vlan Disable :disable vlan

## 5.4 MAC address management

Configure mac-address aging timeout

<b>Command Grammar</b>	epon# <b>mac-address aging &lt;timeout&gt;</b>
<b>Function</b>	Configure mac-address management timeout .
<b>&lt;timeout&gt;</b>	MAC aging time :range: 0-65535s

Show mac-address aging

<b>Command Grammar</b>	epon# show mac-address aging
<b>Function</b>	show mac-address-aging
<b>&lt;timeout&gt;</b>	MAC aging time :range: 0-65535s

## 5.5 Vlan Configuration management

Create vlan

<b>Command Grammar</b>	epon# <b>vlan &lt;vlanid&gt;</b>
<b>Function</b>	Creat vlan and enter vlan config mode
<b>&lt; vlanid &gt;</b>	1-4094

### 【Example】

Example 1: Create vlan100 and enter vlan100 config mode,

```
epon#vlan 100
epon(vlan-100))#
```

**epon(vlan-100) # ?**      enter “? ” or “help” showing the current directory:  
**delete**                          - delete vlan list  
**exit**                              - exit current mode  
**member**                         - add or delete member-port  
**Global command:**  
**debug**                           - debug  
**logout**                         - exit the CLI system  
**show**                            - show system configuration

Add vlan port member

<b>Command Grammar</b>	epon(vlan-100) # <b>member add &lt;member&gt; &lt;tag&gt;</b>
<b>Function</b>	add vlan member and set up tag
<b>&lt;member&gt;</b>	ge1-ge16
<b>&lt;tag&gt;</b>	Mark way is optional parameters, Given tag parameters is out of the packet with the tag The tag parameter default is out of the packet without the tag

### 【Example】

Example 1: add ge1,ge2 and ge3 as vlan100 member and set up tag, add ge4 and ge5 as vlan100 member and set up untag:

```
epon(vlan-100)#member ge1-ge3 tag
epon(vlan-100)#member ge4-ge5
```

Delete vlan port member

<b>Command Grammar</b>	epon(vlan-100)# <b>member del &lt;member&gt;</b>
<b>Function</b>	Delete vlan port member.
<b>&lt;member&gt;</b>	ge1-ge16.

Delete vlan

<b>Command Grammar</b>	epon(vlan-100)# <b>delete &lt;vlanList&gt;</b>
<b>Function</b>	Delete vlan.
<b>&lt;vlanList&gt;</b>	Delete vlan list, Valid values :the combination of 1-4094, Example : delete vlan 10,20,30 delete vlan 100-120 delete vlan 10,100-110,200

Show vlan configuration of vlan

<b>Command Grammar</b>	epon# <b>show vlan &lt;vlanId&gt;</b>
<b>Function</b>	Show vlan configuration of vlan
<b>&lt;vlanId&gt;</b>	all: show all current vlan configuration 。 1-4094: show current vlan-id configuration。

#### 【Example】

Example 1: show all currnet vlan configuration:

```
epon# show vlan all
VLAN-1:
    GE-9    untagged
    GE-10   untagged
    GE-11   untagged
```

GE-12	untagged
GE-13	untagged
GE-14	untagged
GE-15	untagged
GE-16	untagged
GE-1	untagged
GE-2	untagged
GE-3	untagged
GE-4	untagged
GE-5	untagged
GE-6	untagged
GE-7	untagged
GE-8	untagged
VLAN-100:	
GE-3	tagged

## 5.6 Rstp configuration management

Enable/disable RSTP configuration

<b>Command Grammar</b>	epon# rstp <state>
<b>Function</b>	Enable/disable RSTP Function
<b>&lt;state&gt;</b>	enable:enable Rstp Function disable:disable Rstp Function

### 【Example】

Example 1: enable Rstp function

epon# rstp enable
Enable RSTP successful!

Example 2: disable Rstp function

epon# rstp disable
Disable RSTP successful!

Configure Rstp bridge maxage aging time

<b>Command Grammar</b>	epon# rstp bridge maxage <aging>
------------------------	----------------------------------

<b>Function</b>	Configure Rstp bridge maxage time
<b>&lt;aging&gt;</b>	Range: 6-40 It should be less than or equal to the maximum forward delay 2 times

**【Example】**

Example 1: if the forward delay is a maximum of 15 s, configuring the biggest aging time is 30s

```
epon# rstp bridge maxage 15
Configure RSTP max age successful!
```

## Configure Rstp bridge delay time

<b>Command Grammar</b>	epon# rstp bridge fdelay <fdelay>
<b>Function</b>	Configure Rstp bridge delay time
<b>&lt;fdelay&gt;</b>	Range: 4-30s

**【Examole】**

Example 1:configuring Rstp bridge delay time is 15s

```
epon# rstp bridge fdelay 15
Configure RSTP forward delay successful!
```

## Configure Rstp bridge priority

<b>Command Grammar</b>	epon# rstp bridge priority <prio>
<b>Function</b>	Configure Rstp bridge priority
<b>&lt;prio&gt;</b>	Range:p0-p65535

**【Example】**

example1: setting Rstp bring priority is 0

```
epon# rstp bridge priority p0
Configure RSTP bridge priority successful!
```

Configure max counts of Rstp packet per second

<b>Command Grammar</b>	epon# rstp hold-count <count>
<b>Function</b>	Configure max counts of Rstp packet per second
<b>&lt;count&gt;</b>	Range:1-10

【Example】

Example 1: Configure transmit 10 hold-counts of Rstp per second

```
epon# rstp hold-count 10
Configure RSTP transmit holle packet limit successful!
```

Configure Rstp port priority

<b>Command Grammar</b>	epon# rstp port <protid> priority <prio>
<b>Function</b>	Configure Rstp port priority
<b>&lt;protid&gt;</b>	Range: ge1-ge16
<b>&lt;prio&gt;</b>	Value :p0,p16,p32,p48,p64,p80,p96,p112,p128,p144,p160,p176,p192,p208,p224,p240

【Examle】

Example 1: setting ge1 port priority is 0

```
epon# rstp port priority ge1 p0
GE(1)'s priority configuration successful!
```

Configure Rstp port path-cost

<b>Command Grammar</b>	epon# rstp port <protid> path-cost <pathcost>
<b>Function</b>	Configure Rstp port path-cost
<b>&lt;protid&gt;</b>	Port

<b>&lt;pathcost&gt;</b>	Port path cost
-------------------------	----------------

**【Example】**

Example 1: setting ge1 path-cost of Rstp is 2000

```
epon# rstp port ge1 path-cost 2000
GE(1)'s path cost configuration successful!
```

## Configure Rstp edge-port

<b>Command Grammar</b>	epon# rstp port <protid> edgecfg <edge>
<b>Function</b>	Configure Rstp edge-port
<b>&lt;protid&gt;</b>	Switch port
<b>&lt;edge&gt;</b>	edge: edge none-edge:none edge auto: <a href="#">Automatic negotiation</a> Note: the edge of the port don't need after discarding - learning - forwarding steps, and direct conversion to the forwarding state, the rest of the ports need to pass the above process

**【example】**

Example 1: setting ge1 is edge of Rstp

```
epon# rstp port ge1 edgecfg edge
GE(1)'s edge attribute configuration successful!
```

Example 2: setting ge1 is auto configuration

```
epon# rstp port ge1 edgecfg auto
GE(1)'s edge attribute configuration successful!
```

## Configure Rstp p2p port

<b>Command Grammar</b>	epon#rstp port <protid> p2pcfg <p2p>
------------------------	--------------------------------------

<b>Function</b>	Configure Rstp p2p port
<b>&lt;protid&gt;</b>	Switch port
<b>&lt;p2p&gt;</b>	<p>Shared::</p> <p>p2p ::p2p port</p> <p>auto: Automatic negotiation</p> <p>Note: p2p port to allow rapid transition to the forwarding state, shard port need through discarding - learning - forwarding steps forward to transition to the state</p>

**【Example】**

Example: setting ge1 port is p2p port

```
epon# rstp port ge1 p2pcfg p2p
GE(1)'s link type configuration successful!
```

**Configure Rstp protocol version check**

<b>Command Grammar</b>	epon#rstp port <protid> p2pcfg mcheck
<b>Function</b>	Configure Rstp protocol version checlk
<b>&lt;protid&gt;</b>	Switch port

**【Example】**

Example:1 Configure Rstp protocol version check

```
epon# rstp port ge1 mcheck
GE(1) force version successful!
```

**Show Rstp information**

<b>Command Grammar</b>	epon#show rstp
<b>Function</b>	Show Rstp information
<b>&lt;protid&gt;</b>	Switch port

**【Example】**

Example 1: show Rstp information

```

epon# show rstp
RSTP Bridge Status:
  RSTP Setting      :Enable
  Bridge ID [PRI-MAC] :1-e0:67:b3:00:00:00
  Bridge Hello Time   :2 sec
  Bridge Max Age     :25 sec
  Bridge Forward Delay :15 sec
  Transmit Hold Count :10
  Root Bridge ID     :1-e0:67:b3:00:00:00
  Root Path Cost      :0
RSTP Port Status:
  GE Mode Pri PathCost  EdgeC EdgeO P2pC    P2pO    State    Role
  1  RSTP 1    2000       Auto   Edge    P2P     P2P     LinkDown
UNKNOWN
  2  RSTP 128  20000      Auto   NEdge   Auto    P2P     LinkDown
UNKNOWN
  3  RSTP 128  20000      Auto   NEdge   Auto    P2P     LinkDown
UNKNOWN
  4  RSTP 128  20000      Auto   NEdge   Auto    P2P     LinkDown
UNKNOWN
  5  RSTP 128  20000      Auto   NEdge   Auto    P2P     LinkDown
UNKNOWN
  6  RSTP 128  20000      Auto   NEdge   Auto    P2P     LinkDown
UNKNOWN
  7  RSTP 128  20000      Auto   NEdge   Auto    P2P     LinkDown
UNKNOWN
  8  RSTP 128  20000      Auto   NEdge   Auto    P2P     LinkDown
UNKNOWN
Total 8 RSTP ports dumped.

```

## 5.7 Trunk configuration management

Enter trunk config mode

<b>Command Grammar</b>	epon# trunk <tid>
<b>Function</b>	Enter trunk config mode
<b>&lt;tid&gt;</b>	Range:1-4

### 【Example】

Example 1: enter trunk 1 config mode view

epon# trunk 1
epon(trunk-1)#

Add port of trunk member

<b>Command Grammar</b>	<b>epon(trunk-1)# member add &lt;member&gt;</b>
<b>Function</b>	Add trunk's member
<b>&lt;member&gt;</b>	Portlist

**【example】**

Example 1 :add ge1-ge2 port of trunk 1 member

epon(trunk-1)# member add ge1-ge2
-----------------------------------

Delete port of trunk member

<b>Command Grammar</b>	<b>epon(trunk-1)# member del &lt;member&gt;</b>
<b>Function</b>	Delete port of trunk member
<b>&lt;member&gt;</b>	Portlist

**【example】**

example1: delete ge1-ge2 of trunk 1 member

epon(trunk-1)# member del ge1-ge2
-----------------------------------

Delete trunklist configuraion

<b>Command Grammar</b>	<b>epon(trunk-1)# delete &lt;trunkList&gt;</b>
<b>Function</b>	Delete trunklist configuration
<b>&lt;trunklist&gt;</b>	Range: 1-4

**【Example】**

Example1: delete list 1-2 configuration of trunklist

epon(trunk-1)# delete 1-2
---------------------------

Show trunk information

<b>Command Grammar</b>	epon# show trunk <trunkid>
<b>Function</b>	Show trunk information
<b>&lt;trunkid&gt;</b>	all: all of trunklist 。 1-4: Specify the trunk group information

**【Example】**

Example 1: show all trunklist information

epon# show trunk all
TRUNK-1 Member PORTS:
GE-1
GE-2
TRUNK-2 Member PORTS:
GE-3
GE-4

## 5.8 Rmon network monitoring and configuration

### clear all ports statistics

<b>Command Grammar</b>	epon# rmon statistics clear-all
<b>Function</b>	Clear all ports statistics

### Delete the specified port configuration information

<b>Command Grammar</b>	epon# rmon statistics <port>
<b>Function</b>	Delete the specified interface statistics

<b>&lt;port&gt;</b>	interface, With reference to the above 2.3
---------------------	--

**【Example】**

Example1: Delete the ge1 interface rmon statistics statistics

epon# rmon statistics clear ge1
---------------------------------

**rmon history configuration**

Add rmon history configuration

<b>Command Grammar</b>	epon# rmon history add <port> <entry-number> <buckets-number> <interval> <owner>
<b>Function</b>	Rmon history configuration
<b>&lt;port&gt;</b>	Switch port
<b>&lt;entry-number&gt;</b>	History index, range:1-65535
<b>&lt;buckets-number&gt;</b>	History Record number, range 1-65535
<b>&lt;interval&gt;</b>	The time interval of history
<b>&lt;owner&gt;</b>	Belongs to user

**【example】**

Example 1: configue ge1 port rmon 's index is 1, inteval is 5 ,buckets-number is 5, owner is user1

epon# rmon history add ge1 1 5 5 user1
--

Delete rmon history configuration

<b>Command Grammar</b>	epon# rmon history del <entry-number>
<b>Function</b>	Delete rmon history configuration
<b>&lt;entry-number&gt;</b>	History infdex,range:1-65535

## rmon event configuration

### **add rmon event configuration**

<b>Command Grammar</b>	epon#rmon event add <entry-number> <description> <type> <owner>
<b>Function</b>	Add rmon event configuration
<b>&lt;entry-number&gt;</b>	Event index, range : 1-65535
<b>&lt;description&gt;</b>	Description information
<b>&lt;type&gt;</b>	none; no log and no trap log: Record the log information trap: Record the trap information log-trap:Record the log and trap information
<b>&lt;owner &gt;</b>	Belongs to user

#### **【Example】**

Example 1: add rmon event 100

epon# rmon event add 100 rmon-event log yx
--

### **delete rmon event**

<b>Command Grammar</b>	epon#rmon event del <entry-number>
<b>Function</b>	Delete rmon event
<b>&lt;entry-number&gt;</b>	Range:1-65535

#### **【Example】**

Example 1: delete rmon event 100

epon# rmon even del 100
-------------------------

## rmon alarm configuration

add rmon alarm configuration

<b>Command Grammar</b>	epon#rmon event alarm add <entry-number><alarm-variable> <interval> <type> <rising-value><rising-event> <falling-value> <falling-event> <owner>
<b>Function</b>	Add rmon alarm
<b>&lt;entry-number&gt;</b>	Range:1-65535
<b>&lt;alarm-variable&gt;</b>	Oid ,snmp oid
<b>&lt;interval&gt;</b>	Sampling interval
<b>&lt;type&gt;</b>	delta: Refers to two time interval only absolute: Refers to achieve value within a specified period
<b>&lt;rising-value&gt;</b>	Range:2147483648 - +2147483647
<b>&lt;rising-event&gt;</b>	Rising event
<b>&lt;falling-value&gt;</b>	range: 2147483648 - +2147483647
<b>&lt;falling-event&gt;</b>	Falling event
<b>&lt;Owner&gt;</b>	owner

### 【Example】

Example 1: add alarm configuration that oid is 1.3.6.1.2.1.16.1.1.1.4.1 ,**interval** 5s **rising-value** 40000, Rissing-event is 1, **falling-event** 20000, falling-event is 1 ,**typer is absolute**

```
epon# rmon alarm add 1 1.3.6.1.2.1.16.1.1.1.4.1 5 absolute 40000 1 20000 1 yx
```

Delete rmon alarm configuration

<b>Command Grammar</b>	epon#rmon event alarm del<entry-number>
<b>Function</b>	Delete rmon alarm configuration
<b>&lt;entry-number&gt;</b>	Event index, range:1-65535

**【Example】**

Example1: delete rmon alarm 1

epon# rmon alarm del 1
------------------------

Show rmon statistics information

<b>Command Grammar</b>	epon# show rmon statistics <port>
<b>Function</b>	Show rmon port statistics information
<b>&lt;port&gt;</b>	Device port

**【Example】**

Example 1: show rmon statistics ge1

pon# show rmon statistics ge1
GE-1 Statistics:
etherStatsOctets       : 0                  , etherStatsPkts       : 0
etherStatsBroadcastPkts : 0                  , etherStatsMulticastPkts : 0
etherStatsUndersizePkts : 0                  , etherStatsOversizePkts : 0
etherStatsFragments    : 0                  , etherStatsJabbers      : 0
etherStatsCRCAlignErrors: 0                  , etherStatsCollisions  : 0
etherStatsDropEvents   : 0
Packets received according to length:
64      : 0                  , 65-127  : 0                  , 128-255  : 0
256-511 : 0                  , 512-1023 : 0                  , 1024-1518 : 0

Show rmon history information

<b>Command Grammar</b>	epon# show rmon history <port>
<b>Function</b>	Show rmon history information about port
<b>&lt;port&gt;</b>	Switch port

**【Example】**

Example 1: show rmom history ge1

show rmon history ge1
-----------------------

```

HistoryControlEntry 100 owned by yx is VALID
Samples interface      : GE-1
Sampling interval     : 5(sec) with 5 buckets max
Sampled values of record 1 :
dropevents            : 0          , octets           : 0
packets               : 0          , broadcast packets : 0
multicast packets     : 0          , CRC alignment errors : 0
undersize packets     : 0          , oversize packets   : 0
fragments              : 0          , jabbers           : 0
collisions             : 0          , utilization       : 0
Sampled values of record 2 :
dropevents            : 0          , octets           : 0
packets               : 0          , broadcast packets : 0
multicast packets     : 0          , CRC alignment errors : 0

```

show rmon event information

<b>Command Grammar</b>	epon# show rmon event <entry-number>
<b>Function</b>	Show rmon event information
<b>&lt;entry-number&gt;</b>	Event entry-number, 0 means all of event

#### 【Example】

Example 1: show rmon event 1 information

```

epon# show rmon event 1
EventEntry 1 owned by log is VALID
Description : log
Will cause log when triggered.

```

Show rmon eventlog information

<b>Command Grammar</b>	epon# show rmon eventlog <entry-number>
<b>Function</b>	Show rmon eventlog information
<b>&lt;entry-number&gt;</b>	Event entry-number ,0 means all of eventlog

**【Example】**

Example 1: show rmon eventlog 1

```
epon# show rmon eventlog 1
    logEntry 1 is VALID.
        Generates eventLog 1.1 at 01/01/00 00:31:25
        Description : The alarm formula defined in prialarmEntry 1,
                      less than(or =) 4000 with alarm value 0. Alarm sample type is
                      delta.

        Generates eventLog 1.2 at 01/01/00 03:13:25
        Description : The alarm formula defined in prialarmEntry 2,
                      less than(or =) 20000 with alarm value 0. Alarm sample type is
                      absolute.
```

Show rmon alarm information

<b>Command Grammar</b>	epon#show rmon alarm <entry-number>
<b>Function</b>	Show rmon alarm information
<b>&lt;entry-number&gt;</b>	Alarm entry-number, 0 means all of alarm

**【Example】**

Example 1: shhow all of alarm of rmon information

```
epon# show rmon alarm 0
    AlarmEntry 1 owned by yx is VALID
        Samples type      : absolute
        Variable          formula
        1.3.6.1.2.1.16.1.1.1.4.15<etherStatsOctets.15>:
            Sampling interval   : 10(sec)
            Rising threshold    : 40000(linked with event 1)
            Falling threshold   : 20000(linked with event 1)
            When startup enables: risingOrFallingAlarm
            Latest value       : 0
```

## 5.9 Mirror port configuration management

### Enable/disable mirror fuction

<b>Command Grammar</b>	epon# mirror admin <admin>
------------------------	----------------------------

<b>Function</b>	Enable/disable mirror function.
<b>&lt;admin&gt;</b>	enable:enable mirror fuction disable: disable mirror fuction

**【Example】**

Example 1: enable mirror function

```
epon# mirror admin enable
      Set switch mirror enable successful !
```

Example 2: disable mirror function

```
epon# mirror admin disable
      Set switch mirror disable successful !
```

**Configure mirror source\_port**

<b>Command Grammar</b>	epon# mirror source_port <port> <type>
<b>Function</b>	Configure mirror source_port
<b>&lt;port&gt;</b>	Switch port
<b>&lt;tyoe&gt;</b>	none: soure_port have no set egress: the packet of out_flow ingress: the packet of in_flow full: packet both of out_flow and in_flow

**【Example】**

Example 1: configure ge1 ingress mirror

```
epon# mirror source_port ge1 ingress
      Set switch mirror source port: 1 successfull!
```

Example 2: configure soure\_port ge2 egress mirror

```
epon# mirror source_port ge2 egress
      Set switch mirror source port: 2 successfull!
```

Example 3, configure ge3 both of out\_packet and in\_packet

```
epon# mirror source_port ge3 full
      Set switch mirror source port: 3 successful!
```

Configure mirror dest\_port

<b>Command Grammar</b>	epon# mirror dest_port <port>
<b>Function</b>	Configure mirror dest_port
<b>&lt;port&gt;</b>	Switch port

【Example】

Example 1: configure dest\_port ge8

```
epon# mirror dest_port ge8
      Set switch mirror destination port: 8 successful
```

Add/delete vlan soure\_port of in\_packet

<b>Command Grammar</b>	<b>epon# mirror vlan &lt;operation&gt; &lt;vlan-id&gt;</b>
<b>Function</b>	Add/delete vlan soure_port of in_packet
<b>&lt;operation&gt;</b>	add: add operation del: delete operation
<b>&lt;vlan-id&gt;</b>	Source port of the specified vlan Range:1-4094

【Example】

Example 1: add vlan 20 soure\_port of in\_packet

```
epon# mirror vlan add 20
```

Example 2: delete vlan 20 soure\_port of in\_packet

```
epon# mirror vlan del 20
```

Show mirror information

<b>Command Grammar</b>	<b>epon# show mirror</b>
<b>Function</b>	Show mirror information

#### 【Example】

Example 1: show mirror information

```
epon# show mirror
=====
SWITHC      MIRROR      CONFIG
=====
Admin       : enable
destnationPort : ge8
sourceIngressPorts : ge2 ge3
sourceEgressPorts : ge1 ge3
sourceVlan   :
```

## 6 OLT Management

### 6.1 OLT basic configure management

Enter OLT Management

<b>Command Grammar</b>	epon# <b>olt &lt;oltID&gt;</b>
<b>Function</b>	Enter olt configure mode
<b>&lt;oltID&gt;</b>	Pon ID : 1-8.

#### 【Example】

Example 1: enter olt's first pon configure mode:

```
epon#olt 1
epon(olt-1)#
```

**epon(olt-1)# ?**

**acl**

- configure olt level acl

**admin**

- enable or disable this PON

**auth**

- configure authentication mode

---

<b>exit</b>	- exit current mode
<b>mac-address-table</b>	- configure mac-address-table
<b>onu</b>	- configure onu
<b>optical</b>	- olt optical diagnose
<b>p2p</b>	- configure p2p
<b>tpid</b>	- tpid
<b>Global command:</b>	
<b>debug</b>	- debug
<b>logout</b>	- exit the CLI system
<b>show</b>	- show system configuration

Enable/disable OLT port

<b>Command Grammar</b>	epon(olt-1)# <b>admin &lt;enable / disable&gt;</b>
<b>Function</b>	enable/disabke OLT.
<b>&lt;enable&gt;</b>	Enbale OLT.
<b>&lt;disable&gt;</b>	Disable OLT.

Long light checking Function

Configuration all of onu about long light checking Function

<b>Command Grammar</b>	epon(olt-1)# optical lao
<b>Function</b>	ON optical tests under all the ONU, ONU luminous fault to kick off

**Configure the specifild onu about long checking fuction**

<b>Command Grammar</b>	epon(olt-1)# optical lol <llid_1> <llid_2> <llid_3>
<b>Function</b>	Light tests specified under the PON ONU, luminous fault to kick off

## Configure p2p Function

<b>Command Grammar</b>	epon(olt-1)# <b>p2p &lt;enable / disable&gt;</b>
<b>Function</b>	Enabel/disable OLT P2P function, when enable this function,each onu register to this pon can reach each other without uplink swicht
<b>&lt;enable&gt;</b>	Enabel P2P
<b>&lt;disable&gt;</b>	Disable P2P

## Configure out-tpid Function

<b>Command Grammar</b>	epon(olt-1)# <b>tpid out-tpid &lt;tpid&gt;</b>
<b>Function</b>	Configure acl default tpid
<b>&lt;tpid&gt;</b>	0x8100, 0x9100, 0x88a8

## 6.2 OLT ACL Configure

### Delete One ACL

<b>Command Grammar</b>	epon(olt-1)# <b>acl &lt;aclId&gt; delete</b>
<b>Function</b>	Delete the aclid's acl
<b>&lt;aclId&gt;</b>	Acl id number : <1-40>

#### 【Example】

Example 1: delege olt 1 acl 1:

```
epon(olt-1)# acl 1 delete
Delete ACL 1 successfully.
```

## Delete Current OLT All ACL

<b>Command Grammar</b>	epon(olt-1)# <b>acl delete</b>
<b>Function</b>	Delete current olt's all acl

### 【Example】

Example 1: delete olt1's all acl:

```
epon(olt-1)# acl delete
Delete ACL 1 successfully.
```

## Add OLT ACL

<b>Command Grammar</b>	epon(olt-1)# <b>acl &lt;aclld&gt; rule &lt;direction&gt; &lt;precedence&gt; matching "matching string" action "action string"</b>
<b>Function</b>	Add one acl in current olt
<b>&lt;aclld&gt;</b>	value: <1-40>
<b>&lt;direction&gt;</b>	Acl direction: <upstream downstream>
<b>&lt;precedence&gt;</b>	Acl priority: <4-7>
<b>matching string</b>	String to match, fomat is : "proto=12 dst-port=34". Support the parameters as blow: [dst-mac src-mac] <xx:xx:xx:xx:xx:xx> [tag-num] <0 1 2 more> [top-vid inner-vid] <vid vidL-vidH>, vid:1~4094 [top-8021p inner-8021p] <8021p 8021pL-8021pH>, 8021p:0~7 [eth-type] <0~65535> [dscp] <0~63> [proto] <0~65535> [dst-ip src-ip] <x.x.x.x> [dst-port src-port] <0~65535>
<b>action string</b>	Acton string, format as "8021p 7 dscp 63". Support the parameters as blow:

	[cos] <0~7> [8021p] <0~7> [dscp] <0~63> [fwd] <deny   nni <1~4>   pon <1~4> llid <1~128> [rate] cir <> cbs <> pir <> pbs <> [top-vlan   inner-vlan] <pop   push vid <1~4094>   swap vid <1~4094>
--	--

**【Example】**

Example 1 : Filtering the upstream frame of destination MAC address is 00:00:00:00:00:02

```
epon(olt-1)# acl 1 r u 4 m "dst-mac=00:00:00:00:00:02" a "fwd deny"
```

Example 2 : Filtering the downstream of destination MAC address is 00:00:00:00:00:01, tagged is with external VLAN 4094:

```
epon(olt-1)# acl 2 r d 4 m "dst-mac=00:00:00:00:00:01" a "top-vlan push vid 4094"
```

Example 3: Filtering the upstream frame with vlan 100, tagged it with external VLAN 200:

```
epon(olt-1)# acl 3 r u 4 m "top-vid=100" a "top-vlan push vid 200"
```

Example 4: Filtering the upstream frame of destination IP address is 198.19.1.2, tagged it with external vlan 1000:

```
epon(olt-1)# acl 1 r u 4 m "dst-ip=198.19.1.2" a "top-vlan push vid 1000"
```

Example 5: Filtering the upstream frame of destination port is port-2, tagged it with external vlan 1000:

```
epon(olt-1)# acl 1 r u 4 m "dst-port=2" a "top-vlan push vid 1000"
```

## 6.3 OLT MAC Management

### Configure OLT MACAge Time

<b>Command Grammar</b>	epon(olt-1)# <b>mac-address-table aging-time &lt;aging-time&gt;</b>
<b>Function</b>	Configure current olt's mac age time
<b>&lt;aging-time&gt;</b>	Age time: <0~65535> sec, when configure age time to 0, the mac will not ageout

**【Example】**

Example 1: configure current olt's age time to 200s:

```
epon(olt-1)# mac-address-table aging-time 200  
Set slot 1 olt 1 bridge cfg successfully!
```

Flush current olt's mac table list

<b>Command Grammar</b>	epon(olt-1)# <b>mac-address-table flush</b>
<b>Function</b>	Flush current olt's mac table list

Enable OLT MAC Learning function

<b>Command Grammar</b>	epon(olt-1)# <b>mac-address-table learning enable</b>
<b>Function</b>	Enable current olt's mac learning function

Disable OLT MAC Learning Function

<b>Command Grammar</b>	epon(olt-1)# <b>mac-address-table learning disable</b>
<b>Function</b>	Disable current olt's mac learning function

Enable MAC Move

<b>Command Grammar</b>	epon(olt-1)# <b>mac-address-table move enable</b>
<b>Function</b>	Enable mac move

## Disable MAC Move

<b>Command Grammar</b>	epon(olt-1)# <b>mac-address-table move disable</b>
<b>Function</b>	Disable mac move

## 6.4 OLT Auth

### Disable OLT Auth

<b>Command Grammar</b>	epon(olt-8)# <b>auth disable-auth</b>
<b>Function</b>	Disable auth function

### Add/Delete>Show Whitelist

#### Add white member

<b>Command Grammar</b>	epon(olt-8)# <b>auth whitelist add &lt;onu&gt;</b>
<b>Function</b>	Add white member. It will enable the Auth function when first add black member
<b>&lt;onu&gt;</b>	ONU-MAC, format: 00-01-02-AB-CD-EF

Example 1: add own witch MAC e0-67-b3-00-00-06 to whitelist:

```
epon(olt-8)# auth whitelist add e0-67-b3-00-00-06
Add ONU (e0-67-b3-00-00-06) to slot 1 olt 8 whitelist successfully.
```

#### Delete white member

<b>Command Grammar</b>	epon(olt-8)# <b>auth whitelist delete &lt;onu&gt;</b>
<b>Function</b>	Delete white member

<b>&lt;onu&gt;</b>	ONU-MAC, format: 00-01-02-AB-CD-EF.
--------------------	-------------------------------------

Example 1: move onu with MAC e0-67-b3-00-00-06 out from whitelist:

```
epon(olt-8)# auth whitelist delete e0-67-b3-00-00-06
01/01/00 04:13:02 onu-1-8-1 (ctc-30) offline...
Delete ONU (e0-67-b3-00-00-06) from slot 1 olt 8 whitelist successfully.
```

### Show whitelist

<b>Command Grammar</b>	epon# <b>show olt &lt;oltId&gt; auth whitelist</b>
<b>Function</b>	Show whitelist
<b>&lt;oltId&gt;</b>	Pon ID : 1-8

Example 1: show whitelist:

```
epon(olt-8)# show olt 8 auth whitelist
whitelist onu mac:
e0-67-b3-07-d4-78
e0-67-b3-00-00-06
00-a1-02-01-30-d8
Total is 3.
```

### Add/Delete/Show Blacklist

#### Add black member

<b>Command Grammar</b>	epon(olt-8)# <b>auth blacklist add &lt;onu&gt;</b>
<b>Function</b>	Add black member. It will enable the Auth function when first add black member
<b>&lt;onu&gt;</b>	ONU-MAC, format: 00-01-02-AB-CD-EF.

Example 1: add a black member that mac is e0-67-b3-00-00-06:

```
epon(olt-8)# auth blacklist add e0-67-b3-00-00-06
Add ONU (e0-67-b3-00-00-06) to slot 1 olt 8 blacklist successfully.
```

#### Delete Black Member

<b>Command Grammar</b>	epon(olt-8)# <b>auth blacklist delete &lt;onu&gt;</b>
<b>Function</b>	Delete black member
<b>&lt;onu&gt;</b>	ONU-MAC, format: 00-01-02-AB-CD-EF

Example 1: move onu witch 00-67-b3-00-00-06 out from blacklist:

```
epon(olt-8)# auth blacklist delete e0-67-b3-00-00-06
Delete ONU (e0-67-b3-00-00-06) from slot 1 olt 8 blacklist successfully.
```

### Show blacklist

<b>Command Grammar</b>	epon# <b>show olt &lt;oltId&gt; auth blacklist</b>
<b>Function</b>	Show blacklist
<b>&lt;oltId&gt;</b>	Pon ID : 1-8

Example 1: show blacklist:

```
epon(olt-8)# show olt 8 auth blacklist
blacklist onu mac:
e0-67-b3-00-00-06
e0-67-b3-07-d4-78
00-a1-02-01-30-d8
Total is 3.
```

## OLT hybrid Auth Mode Configure

### Add hybrid mode loid account

<b>Command Grammar</b>	epon(olt-8)# <b>auth ctc-auth hybrid add-loid &lt;l oid&gt; password &lt;password&gt;</b>
<b>Function</b>	Add hybrid mode loid account
<b>&lt;l oid&gt;</b>	{MAX 24 Chars}
<b>&lt;password&gt;</b>	{MAX 12 Chars}

Example 1: add a hybrd mode loid account:

```
epon(olt-8)# auth ctc-auth hybrid add-loid cdt password cdt
```

**Delete a hybrid mode loid account**

<b>Command Grammar</b>	epon(olt-8)# auth ctc-auth hybrid delete-loid <loid> password <password>
<b>Function</b>	Delete hybrid mode loid account
<loid>	{MAX 24 Chars}
<password>	{MAX 12 Chars}

Example 1: delete a hybrid mode loid account:

epon(olt-8)# auth ctc-auth hybrid delete-loid cdt password cdt
--

**OLT Hybrid LOID Auth Mode Configure****Add loid account**

<b>Command Grammar</b>	epon(olt-8)# auth ctc-auth loid add <loid> password <password>
<b>Function</b>	Add LOID account
<loid>	{MAX 24 Chars}
<password>	{MAX 12 Chars}

Example 1: add one loid account, name: cdt, password:cdt:

epon(olt-8)# auth ctc-auth loid add cdt password cdt
--

**Delete loid account**

<b>Command Grammar</b>	epon(olt-8)# auth ctc-auth loid delete <loid> password <password>
<b>Function</b>	Delete LOID account
<loid>	{MAX 24 Chars}
<password>	{MAX 12 Chars}

Example 1: delete a loid account:

epon(olt-8)# auth ctc-auth loid delete cdt password cdt
---

## OLT MAC Auth Mode Configure

<b>Command Grammar</b>	epon(olt-8)# <b>auth mac</b>
<b>Function</b>	Enable OLT MAC Auth Mode

## 6.5 Configure packet\_filter of OLT

### Packet\_filter of OLT about DHCP function

<b>Command Grammar</b>	epon(olt-1)# packet-filter dhcp <admin>
<b>Function</b>	Filter upstream flow about dhcp servers packet
<b>&lt;admin&gt;</b>	enable:enable packet-filter dhcp disable: disable packet-filter dhcp

#### 【Example】

Example 1: enable dhcp packet\_filter function of olt

epon(olt-1)# packet-filter dhcp
---------------------------------

### EOC MME packet-filter function

<b>Command Grammar</b>	epon(olt-1)# packet-filter eoc_mme <admin>
<b>Function</b>	EOC MME packet filter
<b>&lt;admin&gt;</b>	enable:enable eoc_mme function disable: disable eoc_mme function

#### 【Example】

Example 1: enable eoc\_mme packet-filter function

epon(olt-1)# packet-filter eoc_mme enable
---

## 6.6 Configure trap alarm and message alarm function of ONU

Configure message alarm about ONU off the electricity

<b>Command Grammar</b>	epon(olt-1)# alarm onuDyingGasp <admin>
<b>Function</b>	ONU off the electricity ,it can print GASP message on the console
<b>&lt;admin&gt;</b>	enable: enable message fuction. disable: disable message function.

### 【Example】

Example 1: Configure GASP message function, ONU off the electricity ,it can print GASP message on the console

epon(olt-1)# alarm onuDyingGasp enable
--

Configure trap alarm about ONU off the electricity

<b>Command Grammar</b>	epon(olt-1)# alarm onuDyingGasp <admin>
<b>Function</b>	ONU off the electricity,it can send trap message about GASP
<b>&lt;admin&gt;</b>	enable:enable send trap of onu Dying Gasp! disable: disable send trap of onu Dying Gasp!.

### 【Example】

Example 1;after ONU off the electricit , TRAP alarm will be sended to SNMP management software

epon(olt-1)# alarm onuDyingGaspTrap enable
--

## 6.7 Configure QinQ function

Add QinQ configuration

<b>Command Grammar</b>	epon(olt-1)# qinq enable <qinq-vid> raw-vlan-id-inbound <vlan-list>
<b>Function</b>	Configure QinQ function
<b>&lt;qinq-vid&gt;</b>	Outbond vlan

<b>&lt;vlan-list&gt;</b>	inbound vlan list
--------------------------	-------------------

**【Example】**

Example 1: setting QinQ configuration that inbound vlan\_list is 50-90 and setting outbound vlan is 100

```
epon(olt-1)# qinq enable 100 raw-vlan-id-inbound 50-90
```

Delete QinQ configuration

<b>Command Grammar</b>	epon(olt-1)# qinq enable <qinq-vid> raw-vlan-id-inbound <vlan-list>
<b>Function</b>	delete QinQ f configuration
<b>&lt;qinq-vid&gt;</b>	Outbond vlan
<b>&lt;vlan-list&gt;</b>	inbound vlan list

**【Example】**

Example 1: delete QinQ configuration that inbound vlan\_list is 50-90 and setting outbound vlan is 100

```
epon(olt-1)# qinq enable 100 raw-vlan-id-inbound 50-90
```

## 6.8 Show olt configuration information

Show olt attribute information

<b>Command Grammar</b>	epon# <b>show olt &lt;oltID&gt; attribute</b>
<b>Function</b>	Show olt attribute information
<b>&lt;oltID&gt;</b>	Pon port ID, range:1-8.

**【Example】**

Example1: show olt attribute information:

```
epon(olt-1)# show olt 1 attribute
Slot 1 olt 1 attributes:
  Fw Version      : 4.2.7.58
  Cfg Version     : 1.7.3.14
  Loader Version   : cefabeba
```

LLID Support	:	64
LLID Registered	:	3
LLID Online	:	3

Show olt optical information

<b>Command Grammar</b>	epon# <b>show olt &lt;oltID&gt; optical</b>
<b>Function</b>	Show olt optical information.
<b>&lt;oltID&gt;</b>	Pon port ID, range:1-8

【Example】

Example1: show olt optical information

```
epon# show olt 1 optical
Slot 1 olt 1 optical informations:
Temperature      : 45.28 (C)
Voltage         : 2.30 (V)
Current          : 1.23 (mA)
Tx Power        : -6.45 (dBm)
Rx Power        : 0.00 (dBm)
```

Show olt online-onu information

<b>Command Grammar</b>	epon# <b>show olt &lt;oltID&gt; online-onu</b>
<b>Function</b>	Show olt online-onu information.
<b>&lt;oltID&gt;</b>	Pon port ID, range:1-8.

【Example】

Example1: show olt online-onu information:

```
epon(olt-1)# show olt 1 online-onu
onuld          mac           type       CTC-Ver   distance
onu-03        e0:67:b3:00:00:06  FD104HC    30        6m
onu-10        00:a1:02:01:30:d8  FD111H     20        6m
onu-11        e0:67:b3:07:d4:78  FD104H     21        6m
```

## Show olt acl information

<b>Command Grammar</b>	epon# <b>show olt &lt;oltID&gt; acl</b>
<b>Function</b>	Show olt acl information.
<b>&lt;oltID&gt;</b>	Pon port ID, range:1-8.

### 【Example】

Example1: show olt acl information:

```
epon(olt-1)# show olt 1 acl
=====
Direction      : upstream
Precedence     : 4
Matching string : "dscp=63 "
Action string   : "dscp=0 "
```

## Show olt auth mode information

<b>Command Grammar</b>	epon# <b>show olt &lt;oltId&gt; auth mode</b>
<b>Function</b>	Show olt auth mode information
<b>&lt;oltId&gt;</b>	Pon port ID , range:1-8

Example1 : show olt auth mode information :

```
epon# show olt 8 auth mode
Slot 1 olt 8 current auth-mode is disable-auth.
```

## Show olt port staus information

<b>Command Grammar</b>	epon(olt-1)# show olt <oltId>admin
<b>Function</b>	Show olt port staus information

<b>&lt;oltId&gt;</b>	Pon port ID , range:1-8
----------------------	-------------------------

**【Example】**

Example1:show olt port status

epon(olt-1)# show olt 1 admin
Slot 1 olt 1 admin status: Enable.

Show olt alarm information

<b>Command Grammar</b>	epon(olt-1)# show olt <oltId> alarm
<b>Function</b>	Show olt alarm information
<b>&lt;oltId&gt;</b>	Pon port ID , range:1-8.

**【Example】**

Example1 : show olt ararm information

epon# show olt 1 alarm
Onu Power Alarm : Disable
Onu Power Alarm Trap : Disable

Show olt learning-mac information

<b>Command Grammar</b>	epon(olt-1)# show olt <oltId> learning-mac <onu>
<b>Function</b>	Show olt learning-mac information
<b>&lt;oltId&gt;</b>	Pon port ID , range:1-8.
<b>&lt;onu&gt;</b>	<b>Don't pick up parameters:show mac address of all port</b> With parameters :show mac address of specified port

**【Example】**

Example1 : show mac address of all port 。

epon# show olt 1 learning-mac 25				
===== SLOT 1 OLT 1 ONU 25 MAC Address Table =====				
Index	MAC Address	ONU	VID	Aging(s)

Show olt p2p information

<b>Command Grammar</b>	<b>epon# show olt &lt;oltId&gt; p2p</b>
<b>Function</b>	Pon port ID, range:1-8.
<b>&lt;oltId&gt;</b>	Pon port ID, range:1-8..

#### 【Example】

Example1: show olt p2p information

epon# show olt 1 p2p
Slot 1 olt 1 p2p status: Enable

Show olt packet-filter information

<b>Command Grammar</b>	<b>epon# show olt &lt;oltId&gt; packet-filter &lt;type&gt;</b>
<b>Function</b>	Show olt packet-filter information
<b>&lt;oltId&gt;</b>	Pon port ID, range:1-8..

#### 【Example】

Example1: show olt packet-filter information

epon# show olt 1 packet-filter dhcp
===== SLOT 1 OLT 1 Packet Filter=====
DHCP : enable

Show olt tpid out-tpid

<b>Command Grammar</b>	<b>show olt &lt;oltid&gt; tpid out-tpid</b>
<b>Function</b>	Show olt tpid out-tpid

<b>&lt;oltId&gt;</b>	Pon port ID, range:1-8.
----------------------	-------------------------

## 7 ONU Management

### 7.1 Show ONU Basic Information

Show Online ONU

<b>Command Grammar</b>	epon# <b>show olt 7 online-onu</b>
<b>Function</b>	Use this command in any mode can check to the specified PON port of the Online-ONU.

【Example】

1: show online-onu

epon# show olt 7 online-onu					
onuid	mac	type	CTC-Ver	distance	
onu-12	e0:67:b3:00:00:04	FD112GM	30	6m	
onu-13	e0:67:b3:00:00:14	FD114GM	30	6m	
onu-14	e0:67:b3:07:14:04	FD101HC	30	6m	
onu-23	e0:67:b3:07:18:02	FD104HC	30	6m	

Show ONU Version

<b>Command Grammar</b>	epon# <b>show olt 7 onu &lt;onuid&gt; ctc sn</b>
<b>Function</b>	Show online-onu version.
<b>&lt;onuid&gt;</b>	Designate online-onu onuid with value range from 1-64.

【Example】

1: show onu version

epon# show olt 7 onu 12 ctc sn	
onu model	: 0x3131326d

onu base-MAC : e0-67-b3-00-00-04
onu hardware Ver: V1.0
onu software Ver: V2.0.2

### Show ONU Capabilities

<b>Command Grammar</b>	epon# <b>show olt 7 onu &lt;onuid&gt; ctc capabilities</b>
<b>Function</b>	Show online-onu capabilities.
<b>&lt;onuid&gt;</b>	Designate online-onu onuid with value range from 1-64.

### Show ONU Optical

<b>Command Grammar</b>	epon# <b>show olt 7 onu &lt;onuid&gt; ctc optical</b>
<b>Function</b>	Show online-onu optical.
<b>&lt;onuid&gt;</b>	Designate online-onu onuid with value range from 1-64.

## 7.2 ONU Management Mode

<b>Command Grammar</b>	epon(olt-7)# <b>onu &lt;onuid&gt;</b>
<b>Function</b>	enter ONU management mode to configure ONU.
<b>&lt;onuid&gt;</b>	designate onuid with valid value 1-64.

### 【Example】

1: enter onu 1 managemnet mode:

epon(olt-7)#onu 1
epon(olt-7/onu-1)#

**epon(olt-7/onu-1)#+**

input "?" to show the following directory:

**catv**

- enable or disable CATV

**ctc**

- CTC configuration mode

**default**

- restore to default setting

**deregister**

- deregister current onu

---

<b>exit</b>	- exit current mode
<b>link</b>	- enter link configure mode
<b>pon</b>	- configure onu PON
<b>pots</b>	- configure VOIP port
<b>save</b>	- save current ONU configuration
<b>uni</b>	- configure UNI
<b>Global command:</b>	
<b>debug</b>	- debug
<b>logout</b>	- exit the CLI system
<b>show</b>	- show system configuration

## 7.3 ONU Basic Operation and Management

Reboot ONU

<b>Command Grammar</b>	epon(olt-7/onu-1)# <b>ctc reboot</b>
<b>Function</b>	reboot ONU.

Deregister ONU

<b>Command Grammar</b>	epon(olt-7/onu-1)# <b>deregister</b>
<b>Function</b>	deregister ONU.

Configure ONU FEC

<b>Command Grammar</b>	epon(olt-7/onu-1)# <b>ctc fec &lt;oper&gt;</b>
<b>Function</b>	Configure ONU fec.
<b>&lt;oper&gt;</b>	value <enable/disable> enable: enable ONU FEC function disable: disable ONU FEC function

## Restore ONU to Default Settings

<b>Command Grammar</b>	epon(olt-7/onu-1)# <b>default</b>
<b>Function</b>	restore ONU to default settings.

### 【Notes】

This command will delete all configuration of the ONU, restored to the factory default configuration, and will automatically restart ONU.

## Configure ONU Sys Management IP

<b>Command Grammar</b>	epon(olt-2/onu-4)># <b>ctc mng-ip &lt;ip&gt; &lt;netmask&gt; &lt;gateway&gt; &lt;CVLAN&gt; &lt;SVLAN&gt;</b>
<b>Function</b>	configure onu sys management ip.
<b>Parameters</b>	<p>&lt;ip&gt; - example: 192.168.12.122          &lt;netmask&gt; - example: 255.255.255.0          &lt;gateway&gt; - example: 192.168.0.1          &lt;CVLAN&gt; - 0-4094          &lt;SVLAN&gt; - 0-4094</p>

## Save Current ONU Configuration

<b>Command Grammar</b>	epon(olt-7/onu-1)# <b>save</b>
<b>Function</b>	Save current onu configuration.

## 7.4 Configure ONU IGMP

### ONU IGMP Global Configuration

**clear-all-multicast-ctrl-group**

<b>Command</b>	epon(olt-7/onu-1)# <b>ctc igmp clear-all-multicast-ctrl-group</b>
----------------	---

<b>Grammar</b>	
<b>Function</b>	clear all multicast ctrl group.

### Configure ONU IGMP fast-leave

<b>Command Grammar</b>	epon(olt-7/onu-1)# <b>ctc igmp fast-leave &lt;oper&gt;</b>
<b>Function</b>	Configure ONU igmp fast-leave function.
<b>&lt;oper&gt;</b>	value <enable/disable> enable: enable igmp fast-leave disable: disable igmp fast-leave

### Configure ONU IGMP Mode

<b>Command Grammar</b>	epon(olt-7/onu-1)# <b>igmp mode &lt; mode &gt;</b>
<b>Function</b>	configure ONU igmp mode.
<b>&lt;mode&gt;</b>	valid value: < gmp-mld-snooping controllable-igmp-mld igmp-snooping-only controllable-igmp pass-through> Some of the parameters may not support, the default is gmp-mld-snooping.

### Configure ONU UNI Port IGMP

#### configure igmp group

<b>Command Grammar</b>	epon(olt-5/onu-7/uni-1)# <b>ctc igmp max-group &lt;groups&gt;</b>
<b>Function</b>	configure igmp group.
<b>&lt;groups&gt;</b>	designate number of igmp groups with valid value <0-255>.

#### Configure igmp vlan

<b>Command Grammar</b>	epon(olt-5/onu-7/uni-1)# <b>ctc igmp vlan-list &lt; vlanTagList&gt;</b>
<b>Function</b>	configure igmp vlan.

<b>&lt;vlanTagList&gt;</b>	valid value: 1-4094, or null
----------------------------	------------------------------

### Configure vlan tag

<b>Command Grammar</b>	epon(olt-5/onu-7/uni-1)# <b>ctc igmp tag-handle &lt;oper&gt;</b>
<b>Function</b>	configure igmp vlan tag or untag.
<b>&lt;Parameters&gt;</b>	value: not-strip-vlan-tag strip-vlan-tag switch

## 7.5 Enter ONU Link Mode

### enter ONU link mode

<b>Command Grammar</b>	epon(olt-7/onu-1)# <b>link &lt;linkID&gt;</b>
<b>Function</b>	enter ONU link mode.
<b>&lt;linkID&gt;</b>	valid value: <1-16>

### Configure ONU Link Upstream SLA

<b>Command Grammar</b>	epon(olt-7/onu-1/link-1)# <b>sla upstream &lt;fix&gt; &lt;cir&gt; &lt;pir&gt; &lt;weight&gt;</b>
<b>Function</b>	configure ONU LINK upstream speed limit.
<b>&lt;fix&gt;</b>	valid value: <0~950000>Kbps
<b>&lt;cir&gt;</b>	valid value: <1~950000>Kbps
<b>&lt;pir&gt;</b>	valid value: <512~1000000>Kbps
<b>&lt;weight&gt;</b>	valid value: <1~20>

## Configure ONU Link Downstream SLA

<b>Command Grammar</b>	epon(olt-7/onu-1/link-1)# <b>sla downstream &lt;pir&gt; &lt;burst&gt; &lt;weight&gt;</b>
<b>Function</b>	configure ONU LINK downstream speed limit.
<b>&lt;pir&gt;</b>	valid value: <512~1000000>Kbps
<b>&lt;burst&gt;</b>	valid value: <128~16383>*256Byte
<b>&lt;weight&gt;</b>	valid value: <0~15>

## Configure ONU Link Acl

<b>Command Grammar</b>	epon(olt-7/onu-1/link-1)# <b>acl &lt;Acclid&gt; rule &lt;direction&gt; &lt;precedence&gt; matching &lt;matching string&gt; action &lt;action string&gt;</b>
<b>Function</b>	configure ONU link acl rule.
<b>&lt;acclid&gt;</b>	valid value: 1-8
<b>&lt;direction&gt;</b>	parameters: upstream downstream
<b>&lt;precedence&gt;</b>	valid value: <4-7>
<b>&lt;matching string&gt;</b>	parameters: [dst-mac] <xx:xx:xx:xx:xx:xx>. [src-mac] <xx:xx:xx:xx:xx:xx>. [tag-num] <0   1   2   more>. [top-vid] <vid   vidL-vidH>, vid:1~4094. [inner-vid] <vid   vidL-vidH>, vid:1~4094. [top-8021p] <8021p   8021pL-8021pH>, 8021p:0~7. [inner-8021p] <8021p   8021pL-8021pH>, 8021p:0~7. [eth-type] <0~65535>. [dscp] <0~63>. [proto] <0~65535>. [dst-ip] <x.x.x.x>. [src-ip] <x.x.x.x>. [dst-port] <0~65535>. [src-port] <0~65535>.
<b>&lt;actionstring&gt;</b>	parameters: [cos] <0~7>. [8021p] <0~7>.

[dscp] <0~63>.  
[fwd] deny.  
[rate] cir <cir> cbs <cbs> pir <pir> pbs <pbs>,  
cir, pir: <0~1000000>Kpbs. cbs, pbs: <0~4095>KB  
[top-vlan] pop.  
[top-vlan] push vid <1~4094>.  
[top-vlan] swap vid <1~4094>.  
[inner-vlan] pop.  
[inner-vlan] push vid <1~4094>.  
[inner-vlan] swap vid <1~4094>.

## 【Example】

1: configure ONU link acl 1 rule

```
epon(olt-7/onu-1/link-1)#acl 1 rule upstream 4 matching dst-mac=00:11:11:11:11:11 action fwd=deny
```

## 7.6 Enter ONU Uni Port Management Mode

<b>Command Grammar</b>	epon(olt-7/onu-1)# <b>uni &lt;uni-&gt;</b>
<b>Function</b>	enter the ONU uniport management mode to configure the ONU uni parameter.
<b>&lt;uni&gt;</b>	designate ONU uni port with valid value <1-24>.

### 【Example】

1: enter the ONU uni port 1 management mode:

```
epon(olt-7/onu-1)#uni 1  
epon(olt-7/onu-1/uni-1)#[
```

**epon(olt-7/onu-1/uni-1)# ?**    input "?" to show the following directory:

ctc - ctc management mode

[exit](#)

#### - ctc management mode

Glo

- exit current mode

## debug

**debug**  
**disable**

- debug

Disable

## entry guest level

[Logout](#)

- exit the CLI system

## Show

## Configure ONU Uni Port Parameters

### Show ONU Uni port information

<b>Command Gramma</b>	epon(olt-7/onu-1/uni-1)> <b>show olt 7 onu 1 uni 1 ctc attribute</b>
<b>Function</b>	Using the command in any mode, can display the current ONU uni port parameter properties.

#### 【Example】

1: show ONU uni port 1 information:

```
epon(olt-7/onu-1/uni-1)> show olt 7 onu 1 uni 1 ctc attribute
    ONU-7/1 UNI-1 Attribut
    Link-State      : linkUp
    Admin-State     : Enable
    FlowCtrl-State  : Enable
    AutoNego-State  : Enable
    Ingress-Rate   : 0 kps
    Egress-Rate    : 0 kps
```

### enable or disable ONU Uni port

<b>Command Gramma</b>	epon(olt-7/onu-1/uni-1)> <b>ctc admin &lt;oper&gt;</b>
<b>Function</b>	enable or disable ONU current port
<b>&lt;oper&gt;</b>	value <enable   disable>: enable: enable ONU port disable: disable ONU port

### configure ONU Uni port auto-nego

<b>Command Gramma</b>	epon(olt-7/onu-1/uni-1)> <b>ctc auto-nego &lt;oper&gt;</b>
<b>Function</b>	enable or disable ONU uni port auto-nego
<b>&lt;oper&gt;</b>	value <enable   disable>: enable: enable ONU uni port auto-nego disable: disable ONU uni port auto-nego

### configure ONU Uni port flow-ctrl

<b>Command</b>	epon(olt-7/onu-1/uni-1)> <b>ctc flow-ctrl &lt;oper&gt;</b>
----------------	--

<b>Gramma</b>	
<b>Function</b>	enable or disable ONU uni port flow-ctrl.
<b>&lt;oper&gt;</b>	value <enable   disable>: enable: enable ONU uni port flow-ctrl disable: disable ONU uni port flow-ctrl

**Configure ONU Uni port Egress Rate**

<b>Command Gramma</b>	epon(olt-7/onu-1/uni-1)> <b>ctc egress-policing &lt; max-rate&gt;</b>
<b>Function</b>	configure ONU uni port egress rate.
<b>&lt; max-rate&gt;</b>	designate max traffic output rate with value<0~1000000>kbps, a value of 0 indicates no speed limit.

**Configure ONU Uni port ingress Rate**

<b>Command Gramma</b>	epon(olt-7/onu-1/uni-1)> <b>ctc ingress-policing &lt; max-rate&gt;</b>
<b>Function</b>	configure ONU uni port ingress rate.
<b>&lt; max-rate&gt;</b>	designate max traffic input rate with value<0~1000000>kbps, a value of 0 indicates no speed limit

**Configure ONU Uni port MAC agine-time**

<b>Command Gramma</b>	epon(olt-7/onu-1/uni-1)> <b>ctc mac-aging-time &lt;timer&gt;</b>
<b>Function</b>	configure ONU uni port MAC aging-time.
<b>&lt; timer &gt;</b>	designate the MACs aging-time with value 0-4294967295 , a value of 0 indicates the MAC address is not aging.

**configure ONU Uni port statistics**

<b>Command Gramma</b>	epon(olt-7/onu-1/uni-1)> <b>ctc statistics &lt;monitoring-status&gt; &lt;monitoring-period&gt;</b>
<b>Function</b>	Configure statistics monitoring status and period.
<b>&lt;monitoring-status&gt;</b>	designate statistics monitoring status with value <enable   disable> enable: enable statistics monitoring

	disable: disable statistics monitoring
<b>&lt;monitoring-period&gt;</b>	designate statistics monitoring status with value <1-4294967295>second

### Configure ONU Uni Port Vlan Mode

**Configure ONU Uni port VLAN aggregation mode (Our company does not support ONU)**

<b>Command Gramma</b>	epon(olt-7/onu-1/uni-1)> <b>ctc vlan-mode aggregation &lt;tpid&gt; &lt;cos&gt; &lt;default-vlan&gt; aggregation-list (Matching)</b>
<b>Function</b>	configure the ONU uni port VLAN for aggregation mode.
<b>&lt;tpid&gt;</b>	designate vlan tpid, the default is 0x8100.
<b>&lt;cos&gt;</b>	designate vlan cos, valid value <0-7>.
<b>&lt;vlan&gt;</b>	designate ONU uni port aggregation mode vlan, valid value <1-4094>, the default is 1.
<b>Aggregation-list</b>	designate ONU uni port aggregation vlan list, maximum support 4.

#### 【Example】

1: For the ONU uni port configuration VLAN mode for aggregation, 100 for default-vlan

epon(olt-7/onu-1/uni-1)> ctc vlan-mode aggregation 0x8100 7 100
---

### Configure ONU Uni port VLAN tag mode

<b>Command Gramma</b>	epon(olt-7/onu-1/uni-1)> <b>ctc vlan-mode tag &lt;tpid&gt; &lt;cos&gt; &lt;vlan&gt;</b>
<b>Function</b>	configure the ONU uni port VLAN for tag mode.
<b>&lt;tpid&gt;</b>	designate vlan tpid, the default is 0x8100.
<b>&lt;cos&gt;</b>	designate vlan cos, valid value <0-7>.
<b>&lt;vlan&gt;</b>	designate ONU uni port tag mode vlan, valid value <1-4094>, the default is 1

#### 【Example】

1: For the ONU uni port configuration VLAN mode for tag, 100 for VLAN

```
epon(olt-7/onu-1/uni-1)> ctc vlan-mode tag 0x8100 7 100
```

#### Configure ONU Uni port VLAN trunk mode

<b>Command Gramma</b>	epon(olt-7/onu-1/uni-1)> <b>ctc vlan-mode trunk &lt;tpid&gt; &lt;cos&gt; &lt;default-vlan&gt; vlan-list (Matching)</b>
<b>Function</b>	configure the ONU uni port VLAN for trunk mode.
<b>&lt;tpid&gt;</b>	designate vlan tpid, the default is 0x8100
<b>&lt;cos&gt;</b>	designate vlan cos, valid value <0-7>.
<b>&lt;vlan&gt;</b>	designate ONU uni port trunk mode vlan, valid value <1-4094>, the default is 1.
<b>Vlan-list</b>	Optional configuration, configuration can be through the VLAN list, the maximum support 60 VLAN number.

#### 【Example】

- 1: For the ONU uni port configuration VLAN model for trunk, 100 for default-vlan, 200,2050 for vlan-list

```
epon(olt-7/onu-1/uni-1)> ctc vlan-mode trunk 0x8100 7 100 vlan-list 200,2050
```

#### Configure ONU Uni port VLAN translation mode

<b>Command Gramma</b>	epon(olt-7/onu-1/uni-1)> <b>ctc vlan-mode translation &lt;tpid&gt; &lt;cos&gt; &lt;default-vlan&gt; translate-list</b>
<b>Function</b>	configure the ONU uni port VLAN for translation mode.
<b>&lt;tpid&gt;</b>	designate vlan tpid, the default is 0x8100.
<b>&lt;cos&gt;</b>	designate vlan cos, valid value <0-7>.
<b>&lt;vlan&gt;</b>	designate ONU uni port translation mode vlan, valid value <1-4094>, the default is 1.
<b>translation-list</b>	The specified uni port list of VLAN, maximum support 8 conversion list.

#### 【Example】

- 1: For the ONU uni port configuration mode of VLAN translation, default-vlan 100, translation-list 200-300 300-400

```
epon(olt-7/onu-1/uni-1)> ctc vlan-mode trunk 0x8100 7 100 translation-list 200-300,300-400
```

### Configure ONU Uni port VLAN transparent mode

<b>Command Gramma</b>	epon(olt-7/onu-1/uni-1)> <b>ctc vlan-mode transparent</b>
<b>Function</b>	configure the ONU uni port VLAN for transparent mode.

#### 【Example】

1: For the ONU uni port configuration VLAN mode for transparent

epon(olt-7/onu-1/uni-1)> ctc vlan-mode transparent
--

#### 【Description】

Different VLAN mode to deal with different frame types.

Transparent Mode:

<b>Frame Direction</b>	<b>Frame Type</b>	<b>Approach</b>
Upstream	Untag frame	Untag frame does not make any change, forwarding.
	Tag frame	Tag frame does not make any changes (original VLAN TAG), forwarding.
Downstream	Untag frame	Untag frame does not make any change, forwarding.
	Tag frame	Tag frame does not make any changes (original VLAN TAG), forwarding.

Tag Mode:

<b>Frame Direction</b>	<b>Frame Type</b>	<b>Approach</b>
Upstream	Untag frame	Switch frames on port's default VLAN(VPID),forwarding.
	Tag frame	Discard the frame
Downstream	Untag frame	Discard the frame
	Tag frame	If the Downstream Tag frame VLAN ID equal to the configuration of the VID, According to VID forwarded to the appropriate UNI port, and stripping the tag; If the downstream Tag frame VLAN ID is not equal to the configuration of the VID, then the frame is discarded

Translation Mode:

<b>Frame Direction</b>	<b>Frame Type</b>	<b>Approach</b>
------------------------	-------------------	-----------------

Upstream	Untag frame	Switch frames on port's default VLAN(VPID),forwarding.
	Tag frame	Tag frame VLAN ID in the configuration of the VID conversion list, forwarding; Tag frame VLAN ID is not in the configuration of the VID conversion list, frame discarding.
Downstream	Untag frame	Discard the frame
	Tag frame	Tag frame VLAN ID corresponds to the entry in the corresponding port of the VLAN Translation list (equal to the input VID configuration), According to the table to convert the VID to a corresponding VID (VID output), forwarding; If the VLAN ID in the corresponding port of the VLAN Translation list without a corresponding entry, discarding; If the TAG frame with VLAN ID as the "default VLAN", after the VLAN label forwarding is stripped down;

Trunk Mode:

Frame Direction	Frame Type	Approach
Upstream	Untag frame	Switch frames on port's default VLAN(VPID),forwarding.
	Tag frame	Tag frame VLAN ID belongs to the port "allowed by VLAN", forwarding; Tag frame VLAN ID does not belong to the port of the "permitted by VLAN," is discarded
Downstream	Untag frame	Discard the frame
	Tag frame	Tag frame VLAN ID belongs to the port "allowed by VLAN", forwarding; Tag frame VLAN ID belongs to the port "allowed by VLAN", forwarding; If the Tag frame VLAN does not belong to the port of the "permitted by VLAN," is discarded.

#### Show ONU Uni port vlan configuration

Command Gramma	epon(olt-7/onu-1/uni-1)>show olt 7 onu 1 uni 1 ctc vlan-mode
Function	Show ONU uni port vlan configuration

#### 【Example】

1: Show ONU uni port vlan configuration:

```
epon(olt-7/onu-1/uni-1)> show olt 7 onu 1 uni 1 ctc vlan-mode
VLAN      MODE: translate
```

Default VLAN: TPID-0x8100, COS-6, VID-3

Traslate List:

2000<->3000

2050<->3050

## 7.7 ONU Authentication Management Mode

Configure ONU Blacklist Authentication mode

<b>Command Gramma</b>	epon(olt-1)# <b>auth blacklist &lt;oper&gt; &lt;onu&gt;</b>
<b>Function</b>	Set the EPON system ONU blacklist authentication mode, ONU is offline.
<b>&lt;oper&gt;</b>	Valid value <add/delete> add: add to blacklist authentication ONU delete: delete from blacklist authentication ONU
<b>&lt;ONU&gt;</b>	add to the blacklist of ONU MAC.

Configure ONU Whitelist Authentication mode

<b>Command Gramma</b>	epon(olt-1)# <b>auth whitelist &lt;oper&gt; &lt;onu&gt;</b>
<b>Function</b>	Set the EPON system ONU whitelist authentication mode;
<b>&lt;oper&gt;</b>	Valid value <add/delete> add: add to whitelist authentication ONU delete: delete from whitelist authentication ONU
<b>&lt;ONU&gt;</b>	add to the whitelist of ONU MAC.

Configure ONU LOID Authentication mode

<b>Command Gramma</b>	epon(olt-1)# <b>auth ctc-auth loid &lt;oper&gt; &lt;onu&gt;</b>
<b>Function</b>	Set the EPON system ONU LOID authentication mode;

<b>&lt;oper&gt;</b>	Valid value <add/delete> add: add to loid authentication ONU delete: delete from loid authentication ONU
<b>&lt;ONU&gt;</b>	add to the loid of ONU LOID.

Disable ONUAuthentication

<b>Command Gramma</b>	epon(olt-1)# <b>auth disable-auth</b>
<b>Function</b>	disable EPON system ONU authentication

## 8 Equipment diagnosis information

### 8.1 Ping command test

<b>Command Grammar</b>	epon# ping <host>
<b>Function</b>	Test equipment and network can reach the target host
<b>&lt;host&gt;</b>	Host ip address

#### 【Example】

Example1: device ip: 192.168.1.100, host ip 192.168.1.234 host and device are The direct connection

```
epon(GE-1)# ping 192.168.1.234
PING 192.168.1.234 (192.168.1.234): 56 data bytes
64 bytes from 192.168.1.234: seq=0 ttl=64 time=8.559 ms
64 bytes from 192.168.1.234: seq=1 ttl=64 time=0.746 ms
64 bytes from 192.168.1.234: seq=2 ttl=64 time=0.561 ms
64 bytes from 192.168.1.234: seq=3 ttl=64 time=0.650 ms
```

## 8.2 Tracert checking the device the path of the host

<b>Command Grammar</b>	epon# tracert <host>
<b>Function</b>	Check the device the path of the host
<b>&lt;host&gt;</b>	Host ip address

### 【Example】

Example1 checking the device the path of the host.

```
epon(GE-1)# tracert 192.168.1.234
traceroute to 192.168.1.234 (192.168.1.234), 10 hops max, 38 byte packets
 1  192.168.1.234 (192.168.1.234)  4.698 ms  0.060 ms  0.069 ms
```
