## Description:

**This Gigabit Power over Ethernet injector allows you to power Phones, Cameras, Access points and other devices remotely and eliminates the need for 110vac transformers at the far end.**

This injector uses 802.3af mode b - pins 4/5 for plus power, and 7/8 for ground shared with data.

Many popular devices like Ubiquiti and Mikrotik use this method to centralize the power source - you can go for 328 ft with a 24v supply to a typical Access Point.

Connect the power supply you need (24v for Ubiquiti or Mikrotik, 48v for others) and reduce the mess of cables. Reboot devices from one central location. We use these in our own installations and are making them available for others.

Cables and Power supply not included - see our other auctions for kits including 12v to 48v power supplies.

Size is 6.2mm x 3.5mm x 2.5mm ( 2.5 x 1.4 x 1 inches)

2.1mm x 5.5mm power plug

Can also use as gigE splitter
